PRODUCT NEWS

SPRING 2019

CRAFTED BY MITSUBISHI MATERIALS

DIA EDGE

The
PRECISION
of our products
ensures the
PERFECTION
of yours

CRAFTED BY MITSUBISHI MATERIALS

For the skilled engineers manufacturing quality parts with tight tolerances, DIAEDGE Cutting Tools, crafted by Mitsubishi Materials, offers unparalleled performance in the service of creating a precisely perfect product, every time.

TURNING

Inserts

NEW PRODUCT

DIA EDGE

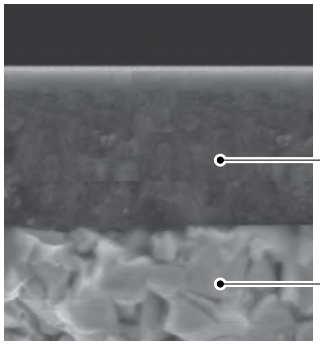
9000 SERIES

Difficult-to-cut MATERIALS

The high Al-rich (Al,Ti)N single layer coating significantly reduces edge fracturing.

B214A

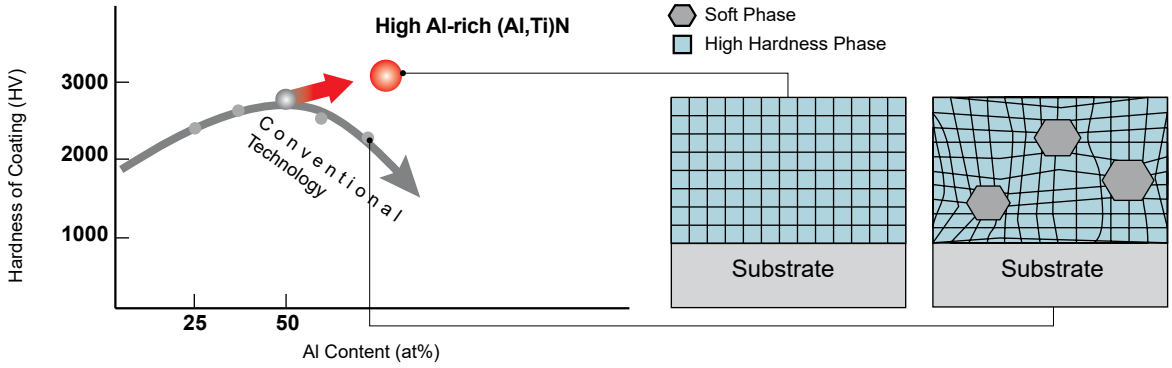
PVD Coated Grade
MP9005/MP9015/MP9025 NEW



MP9005/MP9015/MP9025

High Al and Conventional Coating Comparison

The high Al-rich (Al,Ti)N single layer coating provides stabilization of the high hardness phase and succeeds in dramatically improving wear, crater and welding resistance.



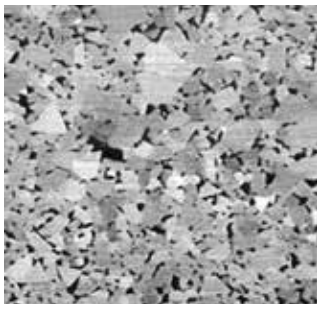
ISO Grade	Grade	Concept	Application
S01	**MP9005**	Top-quality grade focusing on wear resistance.	Heat Resistant Alloys / Finish Medium Cutting
S10	**MP9015**	First recommendation for general applications.	Heat Resistant Alloys / Medium Rough Cutting
S30	**MP9025**	Prevents severe damage for Increased stability.	Heat Resistant Alloys Interrupted • Light-Rough Cutting

* See Index on page 4 for table icon reference. (●, ★, ☐)

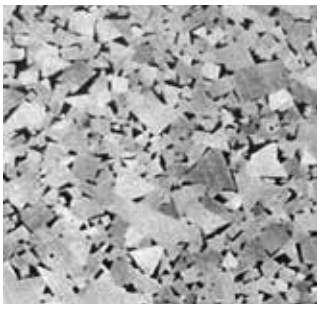
9000 SERIES

MT9005/MT9015

Carbide Grade (Non Coated)

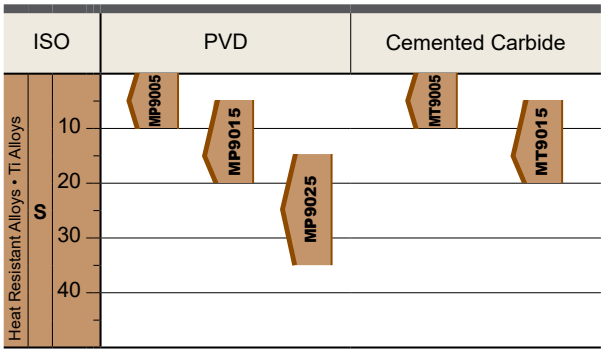


MT9005



MT9015

Application Range



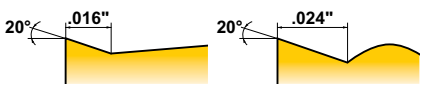
ISO Grade	Grade	Concept	Application
S01	**MT9005**	Cemented carbide with unmatched resistance to heat and plastic deformation.	Titanium Alloys /High Speed Cutting
S10	**MT9015**	Cemented carbide with sharp cutting edge, excellent wear and fracture resistance.	Titanium Alloys/General Cutting

* See Index on page 4 for table icon reference. (●, ★, □)

Negative Inserts

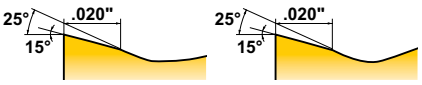
LS Breaker for Light Cutting

Enhanced chip disposal for depths of cut smaller than the corner R.



MS Breaker Newly Designed for Medium Cutting

The large 2-step rake angle generates chips smoothly and without tangling during low feed cutting.

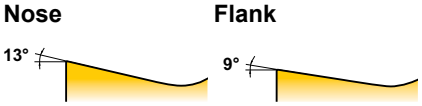


MA Breaker for Medium Cutting

Suitable for medium cutting range.

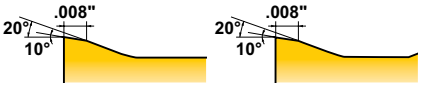
NEW MJ Breaker Sub Breaker

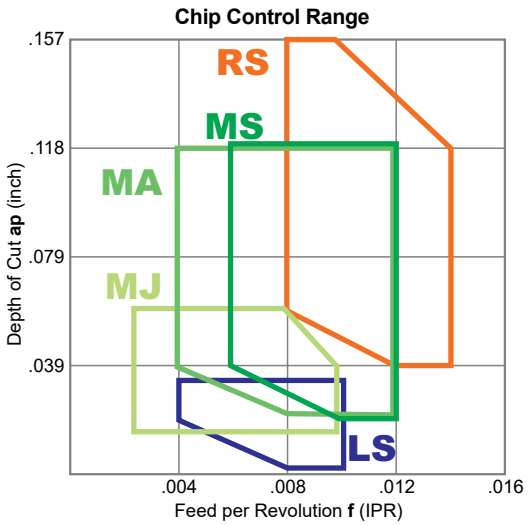
Alternative chip breaker of main chip breaker LS and MS.
Excellent notch wear resistance for light to medium cutting.



RS Breaker for Rough Cutting

During low speed cutting the positive land controls chip welding and abrasion at the depth of cut line.





The chip breaker control range was tested for optimum chip evacuation when cutting Inconel718 with a CNMG432○○ insert.

9000 SERIES

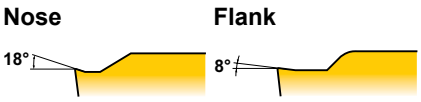
S

Chip Breaker System

Positive Inserts

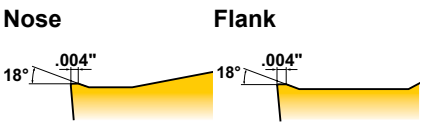
LS Breaker for Light Cutting

Prevents welding of the insert and controls white turbidity of the surface finish.

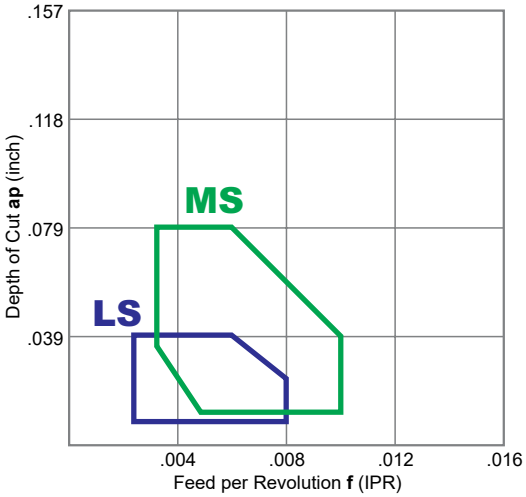


MS Breaker for Medium Cutting

The wide chip pocket reduces cutting resistance, vibration and chip jamming at large depths of cut.



Chip Control Range



The chip breaker control range was tested for optimum chip evacuation when cutting Inconel718 with a DCMT32.51◌◌ insert.

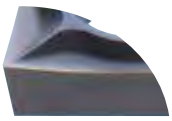
Precision Chip Breaker System

Set the corner radius to a minus tolerance

CCGT21.51MLS → 1M RE .015 inch (RE .014-.016 inch)

FS/FS-P Breaker for Finish Cutting

FS



First Recommendation for Finish Cutting of Difficult-to-cut Materials

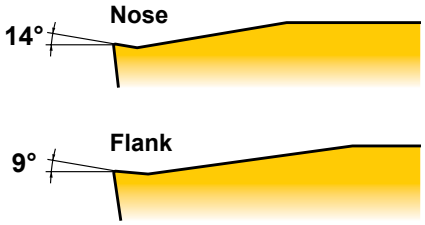
Ideal for heat resistant alloys, titanium alloys, and cobalt chromium alloys.
Sharp cutting edges provide excellent surface precision and finish.
Highly efficient chip discharge is possible due to curved cutting edges.

FS-P

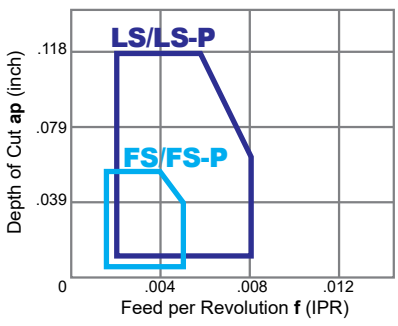
Mirror Finish

First Recommendation for Finish Cutting of Titanium Alloys

Ideal for titanium alloys and copper alloys.
Sharp cutting edges provide excellent surface precision and finish.
Highly efficient chip discharge is possible due to curved cutting edges.
Polished (mirror-surface) finish of insert surfaces drastically improves welding resistance extending tool life.



Chip Control Range



LS/LS-P Breaker for Light Cutting

LS

First Recommendation for Light Cutting of Difficult-to-cut Materials

Ideal for heat resistant alloys, titanium alloys, and cobalt chromium alloys.
Designed with straight parallel cutting edges with high depth of cut capabilities.
Achieves stable chip control over a wide depth of cut range.

LS-P

Mirror Finish

First Recommendation for Light Cutting of Titanium Alloys

Ideal for titanium alloys and copper alloys.
Designed with straight parallel cutting edges with high depth of cut capabilities.
Achieves stable chip control over a wide depth of cut range.
Polished (mirror-surface) finish of insert surfaces drastically improves welding resistance.

Note 1) When cutting conditions are unstable, please refer to pages 9-10 for recommended chip breaker and grade.
Note 2) Verify the recommended conditions for each boring bar as cutting conditions for internal machining will vary depending on the length of overhang.
Note 3) MC7015, MC7025 and MP7035 grade are also recommended for precipitation hardening stainless steels.

* See Index on page 4 for table icon reference. (●, ★, □)

For Effective Use of Large Corner Radius

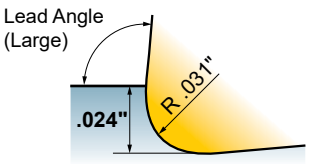
By setting the depth of cut smaller than the corner radius value, notching during cutting of heat resistant alloys can be greatly reduced.

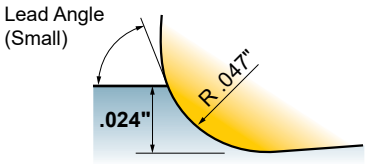
Corner Radius > 1.5 x Depth of Cut

Depth of cut: .024 inch. Corner radius over .035 inch is recommended.

Point

A smaller lead angle is the key to reduced notching.

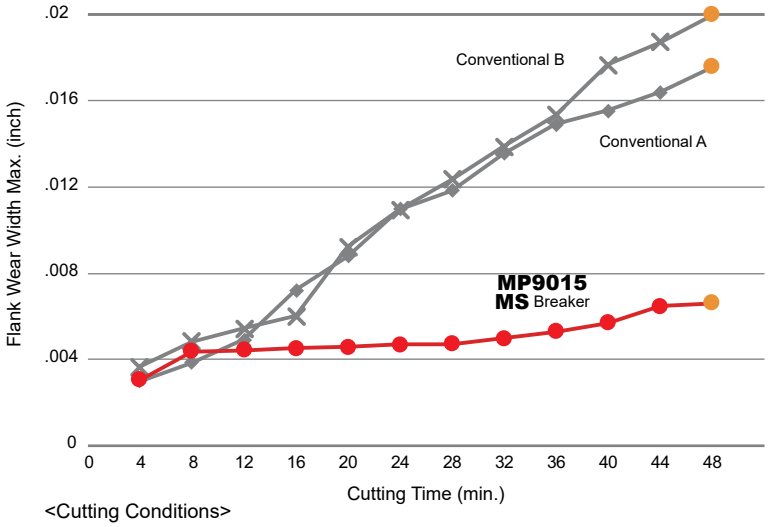




* See Index on page 4 for table icon reference. (●, ★, □)

Cutting Performance

Comparison in Continuous Machining of AISI 630



<Cutting Conditions>
Workpiece Material : AISI 630
Inserts : CNMG432◌◌

Cutting Conditions	Cutting Speed vc (SFM)	260	195
	Feed per Rev. f (IPR)	.0031	.0016
	Depth of Cut ap (inch)	.012	.012
Cutting Mode		Wet Cutting (Water-insoluble Coolants)	Wet Cutting (Water-insoluble Coolants)
Machine		Swiss Style Lathes	Swiss Style Lathes
Results		Compared to conventional product with inconsistent tool life, whose unstable chip evacuation can cause entanglement of chips in workpiece materials, the LS breaker provided stable chip evacuation allowing machining to be performed up to machining constants. It also exhibited excellent wear conditions after turning.	Even when machining at 1.5X the existing conditions of conventional product, there were no variations in turning surface dimensions. The amount of wear was also extremely small, resulting in longer tool life and cost reduction.

Inserts (Grade)		DCGT32.50.5MFS-P (MT9005)	DCGT21.50.2MFS (MP9015)
Workpiece Material		Ti-6Al-4V ELI	AISI 304
Cutting Conditions	Cutting Speed vc (SFM)	210	260
	Feed per Rev. f (IPR)	.0024	.0020
	Depth of Cut ap (inch)	.030	.012
Cutting Mode		Wet Cutting (Water-insoluble Coolants)	Wet Cutting (Water-insoluble Coolants)
Machine		Swiss Style Lathes	Swiss Style Lathes
Results		Compared to conventional PVD coated product, the cemented carbide MT 9005 (uncoated) provided exceptional machined surface roughness even at 2X the number of cuts. The extremely small amount of wear and stable dimensional precision allowed further machining extension.	Compared to conventional product, the amount of wear was small and chip evacuation was excellent, making it possible to perform machining at 1.5X the existing conditions.

The above application examples are customer's applications, so it can be different from the recommended conditions.

* See Index on page 4 for table icon reference. (●, ★, □)

Inserts (Grade)		DNMG432MS (MP9005)	CNMG432RS (MP9015)
Workpiece		Inconel718 (Ni Based Heat Resistant Alloy)  45HRC Aging Treatment	HAYNES Alloy 25 (Co Based Heat Resistant Alloy) Component		Disk - Aerospace Component	Cover Plate - Aerospace Component
Application		Internal Turning	External Turning
Cutting Conditions	Cutting Speed vc (SFM)	195	110
	Feed per Rev. f (IPR)	.006	.008
	Depth of Cut ap x ae	.010 x .591	.059 x 1.654 (3 Pass)
Cutting Mode		Wet Cutting	Wet Cutting
Results		Conventional (S10) MP9005+MS  MP9005 - Stable machining and less wear with long tool life without chip tangling.	Conventional (S10) MP9015+RS  Both conventional and MP9015 display notch wear but the conventional grade wear was greater and exposed the substrate.

The above application examples are customer's applications, so it can be different from the recommended conditions.

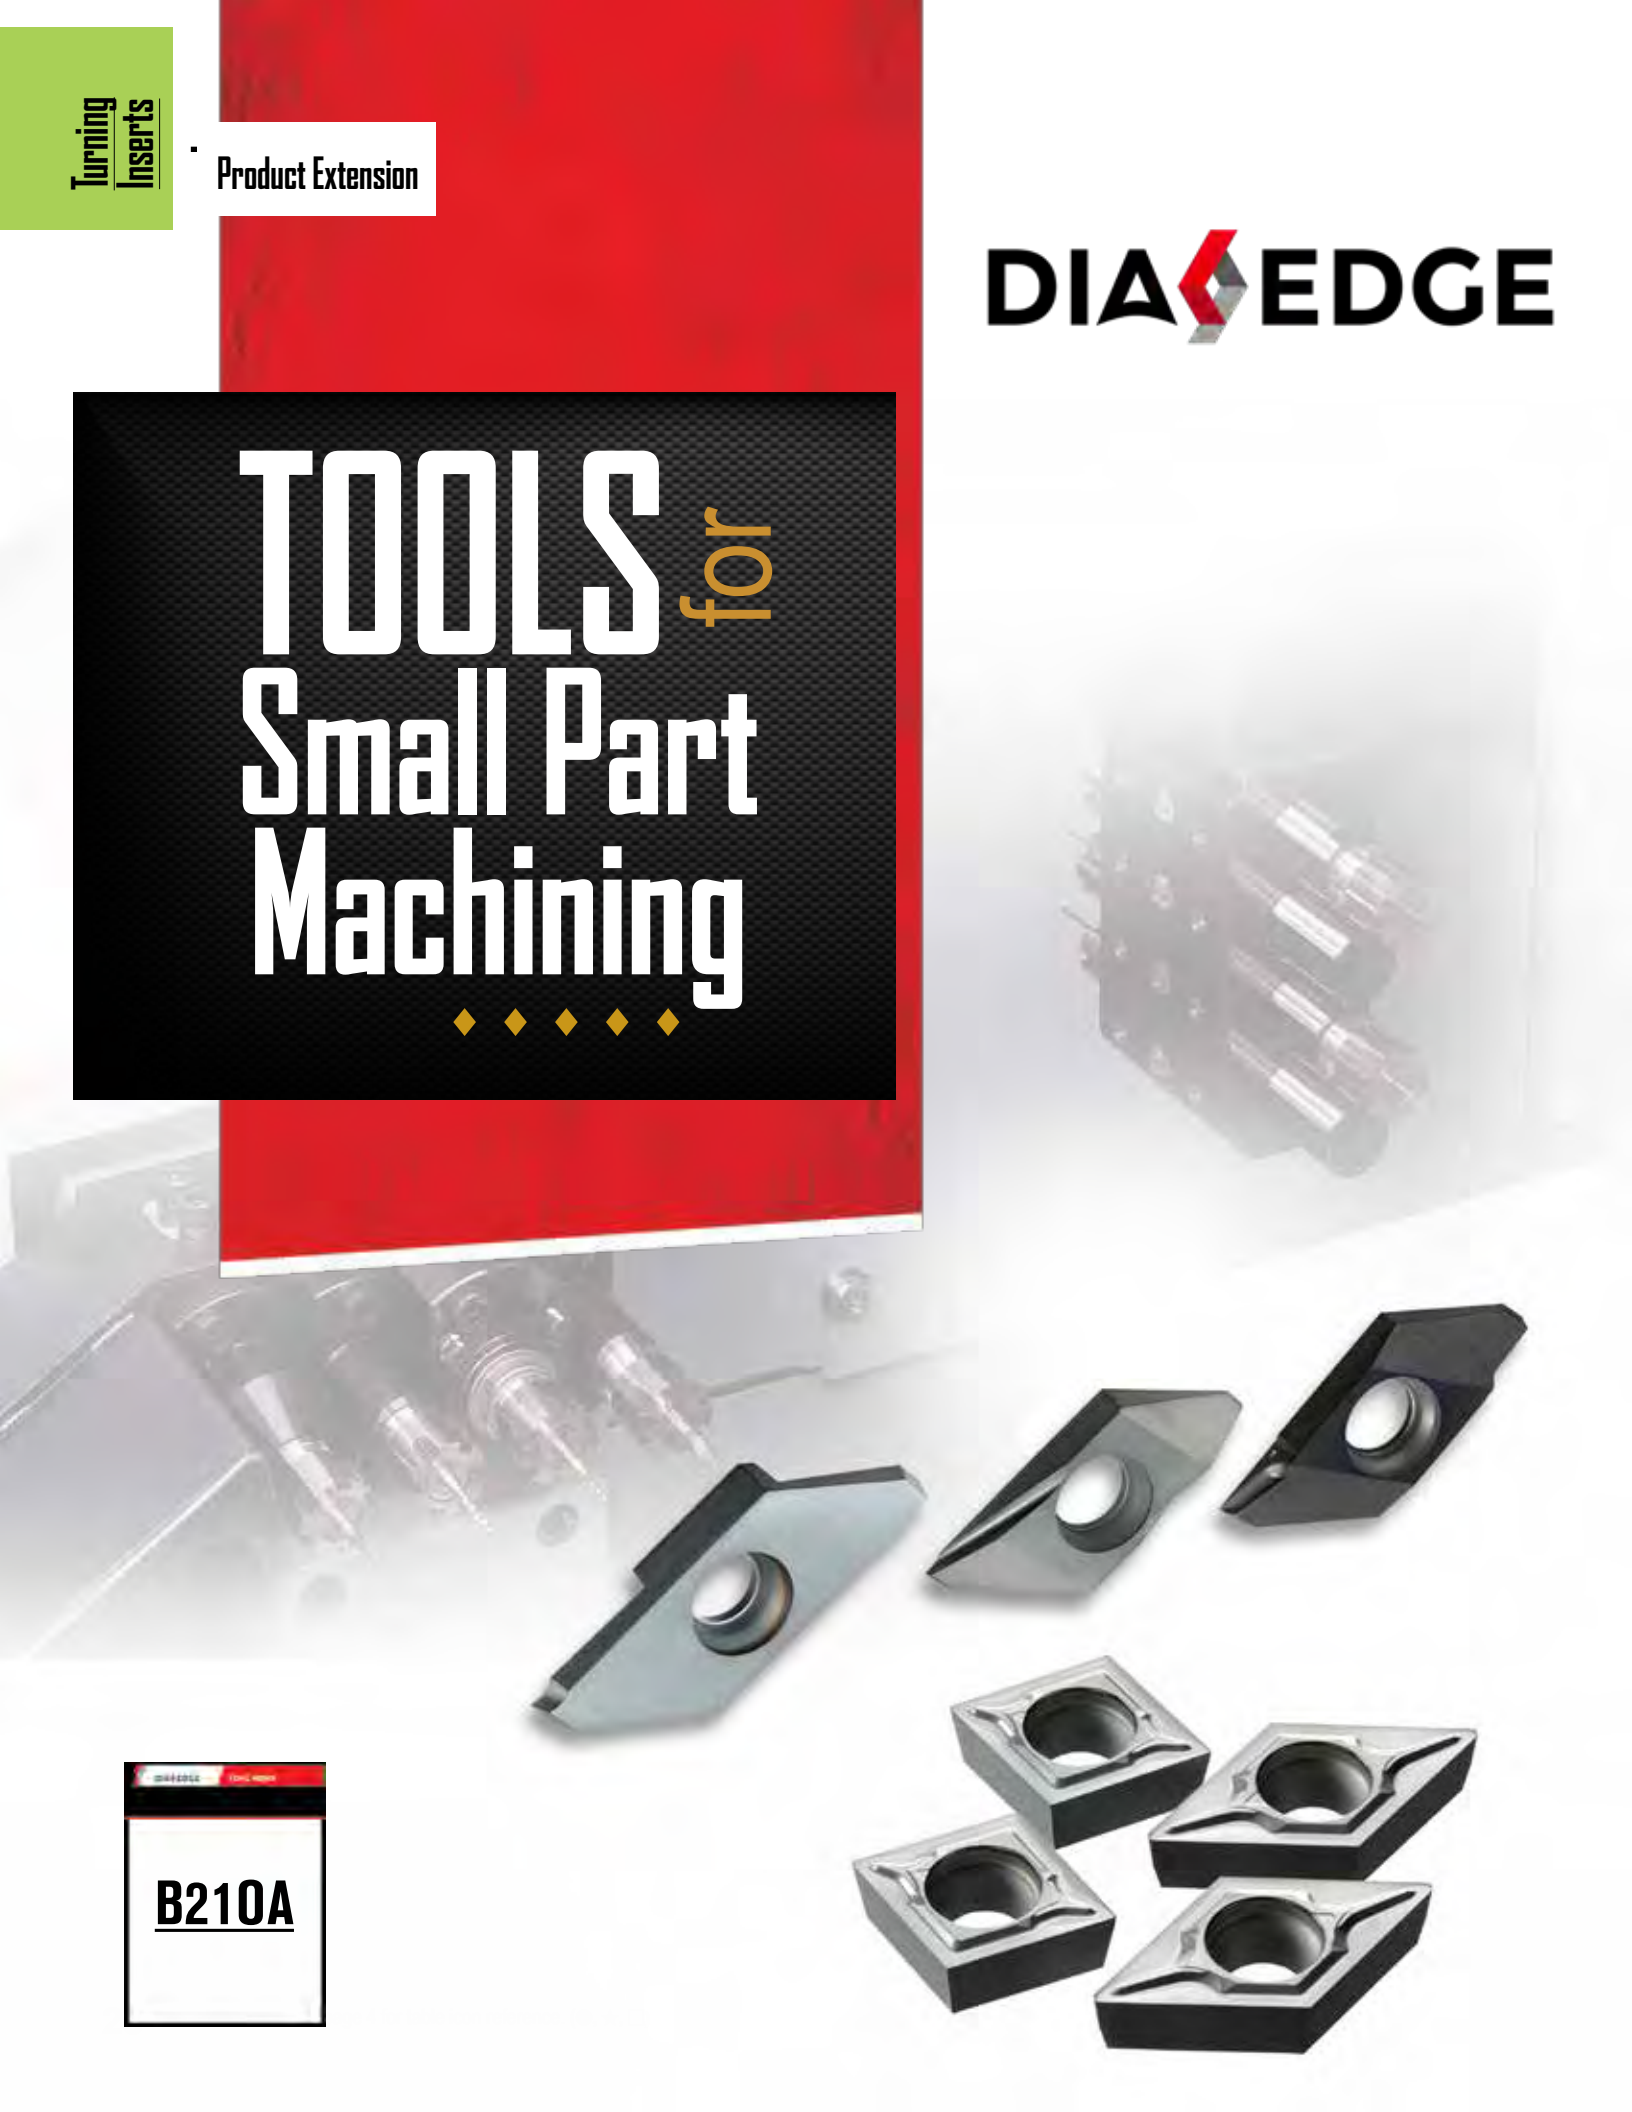
TOOLS for Small Part Machining



B210A

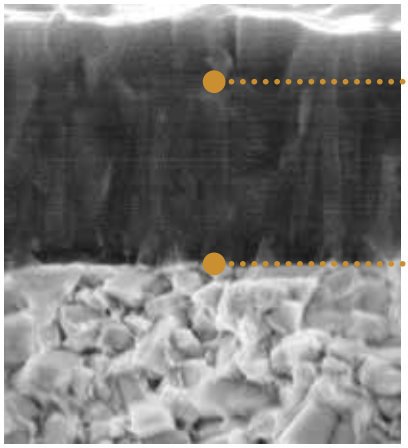
♦PVD Coated Cemented Carbide Grade for Carbon Steels
♦Designed for performance in irons, carbon steels, and free cutting steels.

Insert Grades

A fine grain carbide substrare and a new PVD coating that greatly improves wear resistance.

	MS6015	Conventional
Coating	TiCN Multilayer	TiAlN
Hardness (HV)	3000	2800
Wear Coefficient (Carbon Steels)	Low	High
Base Material Hardness (HRA)	92.0	92.0
T.R.S (GPa)	2.0	2.0

Ti-C-N Multilayer Coating



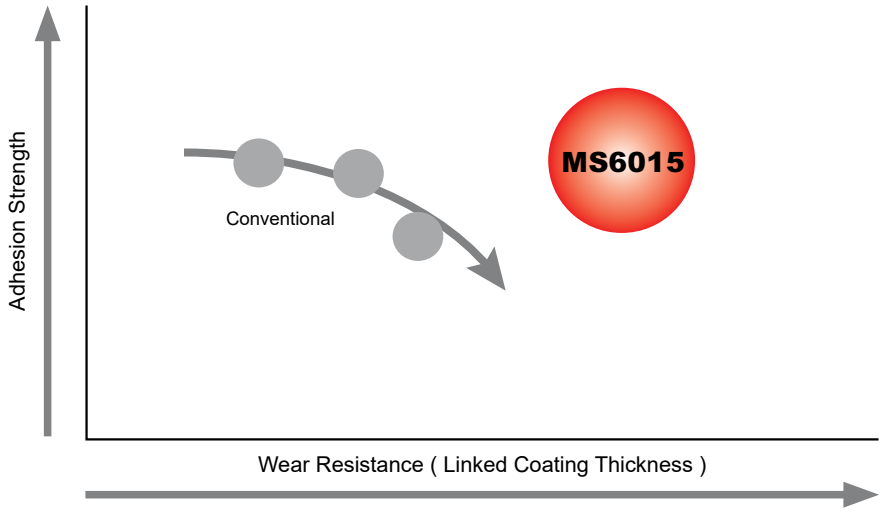
Superior wear and welding resistance and demonstrating the best possible results for carbon steels.

Minute multilayers remarkably improve welding.

Extremely smooth PVD coating meens exellent chip evacuation resulting in good wall surface finish and long tool life.

Optimizing the Laminated Structure

Optimizing the laminated structure enables the thickening of coating which leads to significant wear resistance.



* See Index on page 4 for table icon reference. (●, ★, ☐)

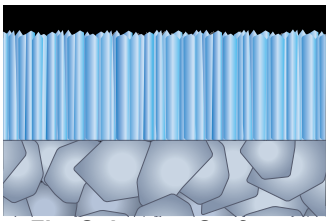
Light Cutting LS-P Breaker

♦Surface treatment before coating drastically improves welding resistance extending tool life.

♦ By flattening the substrate surface, the coating particles crystals form straighty, leading to stable cutting and welding prevention.

*Graphical Representation.

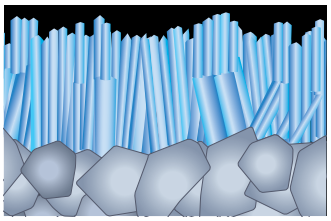
LS-P Breaker



Flat Substrate Surface

Coating layer forms straighty. Coating surface is smooth and prevents welding.

Conventional



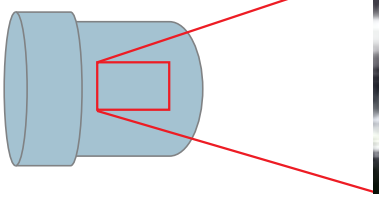
Uneven Substrate Surface

Coating layer forms irregularly. Low cutting performance due to voids and defects.

Cutting Performace

Surface Roughness in Soft Magnetic Iron Cutting

High quality worked surface preventing cloudiness.



Cutting Time ≒ 9 min

SMB Breaker

♦**Pressed Insert for Back Turning**

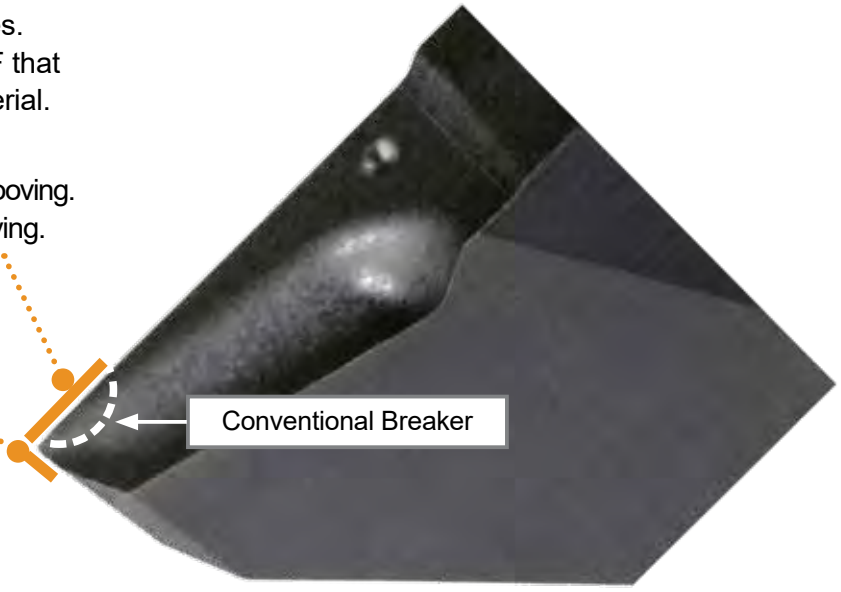
♦**Outstanding surface finish in back turning applications from a pressed geometry.**

Design

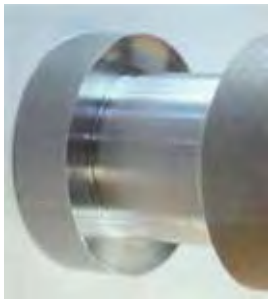
Eliminates the need for rough and finish passes. Achieves a stable tool life by adopting VP15TF that can be used for many types of workpiece material.

Prevents the biting of the chip at end face when grooving. Geometry stabilizes insert when plunging of grooving.

Good surface finish from wiper geometry.



SMB Breaker



Conventional (Ground Type)

TOOLS FOR SMALL PART MACHINING

P M

Application Example

Insert (Grade)		DCGT32.50.5MSMG (MS6015)	DCGT32.50.2MRSN (MS6015)
Workpiece		Iron-based Soft Magnetic Material (ELCH2) 	Free Cutting Steel (AISI 12L14) Cutting Conditions	Cutting Speed vc (SFM)	645 (4500min^{-1})	410 (5000min^{-1})
	Feed per Rev. f (IPR)	.004	.002
	Depth of Cut ap (inch)	.004	.012
Cutting Mode		Wet Cutting (Water-insoluble)	Wet Cutting (Water-insoluble)
Machine		Swiss Style Lathes	Swiss Style Lathes
Results		 An excellent finished surface and 1.4X longer life compared with conventional products. Stable SMG breaker and chip discharge management.	 MS6015 has minimal welding and maintains secure dimensional accuracy.

Insert (Grade)		DCGT32.50.5MRSN (MS6015)	DCGT32.50.5MSMG (MS6015)
Workpiece		Carbon Steel (AISI 1045) 	Mild Steel (AISI 1015) Cutting Conditions	Cutting Speed vc (SFM)	370 (3000min^{-1})	330 (1300min^{-1})
	Feed per Rev. f (IPR)	.001	.005
	Depth of Cut ap (inch)	.039	.051
Cutting Mode		Wet Cutting (Water-insoluble)	Wet Cutting (Water-insoluble)
Machine		Swiss Style Lathes	Swiss Style Lathes
Results		 MS6015 has superior wear resistance and achieves 2X longer life compared with conventional products.	 MS6015 has superior welding resistance and achieves 1.3X longer life compared with conventional products.

* See Index on page 4 for table icon reference. (●, ★, ☐)

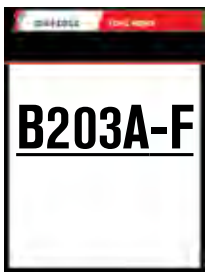
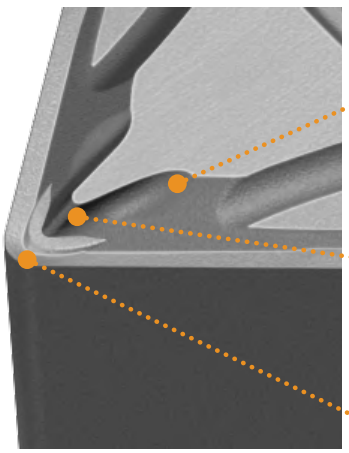
DIA EDGE

FP BREAKER

BETTER CHOICE for
Steel finish cutting





Stable Chip Control in Wide Range

1st and 2nd convex and recess geometry provide stable chip control.1st convex provides excellent chip control in low feed rates.

Available to Both General and Low Carbon Steel Cutting

2nd convex is effective for chip control of soft materials.

A Good Surface Finish Through the 20°Positive High Rake Angle

TURNING

Inserts

CBN/PCD
Turning Inserts

New Product

DIAEDGE

MB4120

Improve Productivity with
excellent fracture
resistance & stable cutting

B246A

CBN Grade for Sintered Alloys and Cast Irons

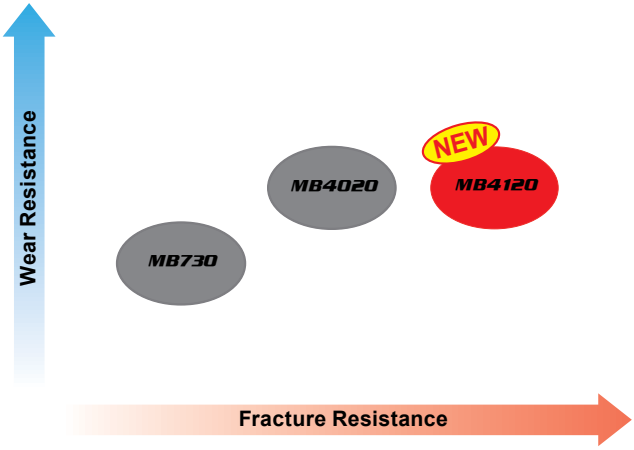
Increasing the CBN particle content and bonding strength makes it suitable for machining various sintered materials.

High Fracture Resistance

Fine CBN particles increase cutting edge toughness. The high fracture resistance allows stable performance even during interrupted machining.

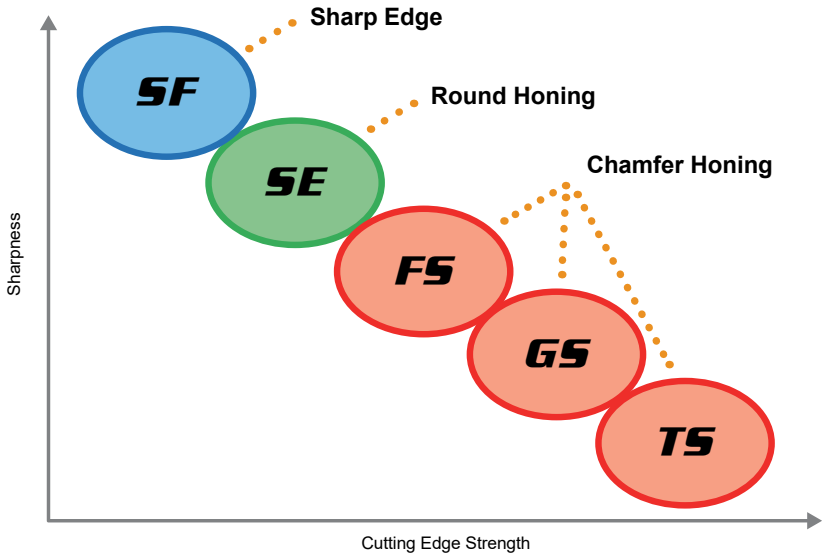
High Adhesion Strength of Fine CBN Particles

Optimization of the sintering conditions strengthens adhesion between fine CBN particles. This increases both fracture resistance and wear resistance.



A Wide Range of Edge Preparation (Honing) are Available

The SF type offers a sharper cutting edge, leading to the reduction in cutting resistance and burr development and an increase in surface finishes. The SF type is the first recommendation but, to increase cutting edge strength and chipping resistance there are also the SE, FS, GS and TS edge preparations.

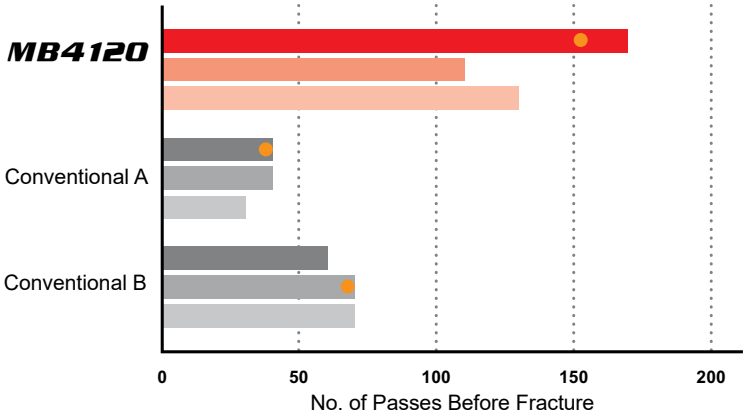


* See Index on page 4 for table icon reference. (●, ★, □)

Cutting Performance

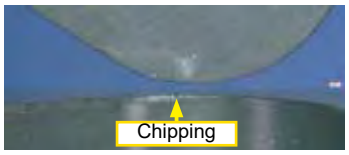
Fracture Resistance Comparison During Interrupted Facing of High Strength Sintered Alloy

Increased fracture resistance even during heavy interrupted machining.



<Cutting Conditions>
Work Material : High Strength Sintered Alloy
Insert : NP-TNGA332-SE3
Cutting Speed : vc=490 SFM
Feed per Rev. : f=.006 IPR
Depth of Cut : ap=.004 inch
Cutting Mode : Wet Cutting

MB4120 — 150 pass

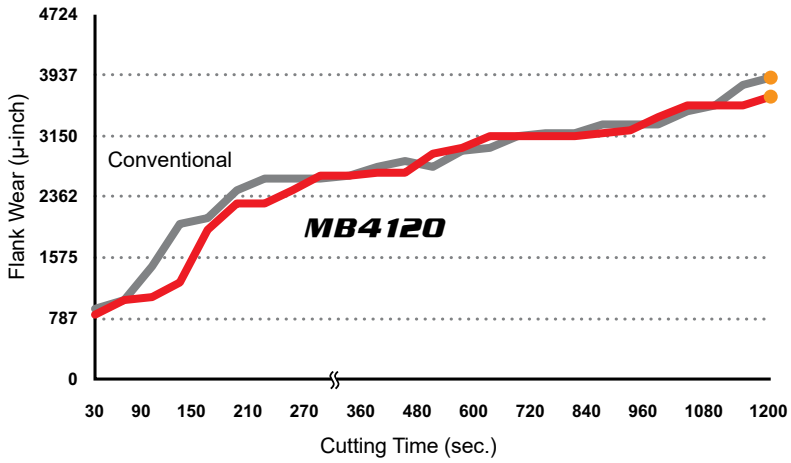


Conventional A — 40 pass

Conventional B — 70 pass

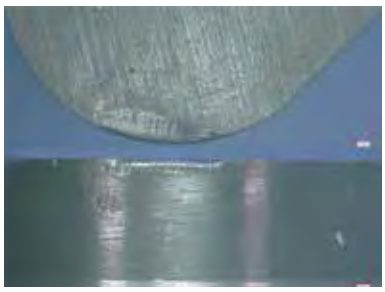
Comparison in Continuous Machining of AISI No 35 B

Excellent fracture resistance compared to conventional products.

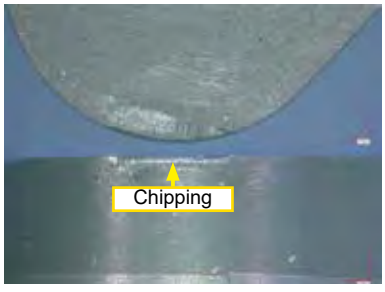


<Cutting Conditions>
Work Material : AISI No 35 B (Perlite)
Insert : NP-TNGA332-SF3
Cutting Speed : vc=2625 SFM
Feed per Rev. : f=.004 IPR
Depth of Cut : ap=.008 inch
Cutting Mode : Dry Cutting

MB4120 — 1200 sec



Conventional — 1200 sec



* See Index on page 4 for table icon reference. (●, ★, □)

General Sintered Alloys	**MB4120**	Turning		≤.008	≤.012	Dry, Wet
High Strength Sintered Alloys	**MB4120**	Turning		≤.008	≤.012	Dry, Wet
Hardened Sintered Alloys	**MB4120**	Turning		≤.008	≤.012	Dry, Wet

(inch)

Cast Irons

Work Material	Grade	Machining	**vc** (SFM) 820 1640 2460 3280 4100	**f** (IPR)	**ap**	Cutting Mode
Gray Cast Irons	**MB4120**	Turning		≤.016	≤.020	Dry, Wet

* See Index on page 4 for table icon reference. (●, ★, □)

Application Examples

Insert	NP-DCGW32.52-SF2	NP-DCGW32.52-SF2	NP-DCGW32.52-SF2
Workpiece	**General Sintered Alloy** 	**General Sintered Alloy** 	**Iron-based Sintered Alloy (60HRB)** Ra≤1.0μm Component	Housing(Interrupted Boring)	Case(Interrupted Boring)	Pinion(Interrupted Facing)
Cutting Conditions: Cutting Speed vc (SFM)	**655**	**590**	**655**
Cutting Conditions: Feed per Rev. f (IPR)	**.003**	**.010**	**.0016 – .0020**
Cutting Conditions: Depth of Cut ap (inch)	**.008**	**.008 – .012**	**.016**
Cutting Mode	Wet Cutting	Wet Cutting	Wet Cutting
Results	 Double the tool life of the conventional product.	 Double the tool life of the conventional product.	 As compared with the conventional product, good surface finishes were maintained and 2.5 times longer tool life was achieved.

Insert	NP-TNGA332-SF3	NP-TNGA332-SE3	NP-CNGA432-SF2
Workpiece	**High Strength Sintered Alloy** 	**General Sintered Alloy** 	**Cast Iron** Component	Sprocket(Continuous Boring)	Sprocket(Interrupted Facing)	Mechanical Parts(Interrupted Facing)
Cutting Conditions: Cutting Speed vc (SFM)	**820**	**785**	**1970**
Cutting Conditions: Feed per Rev. f (IPR)	**.004**	**.005**	**.007 – .010**
Cutting Conditions: Depth of Cut ap (inch)	**.004**	**.002**	**.006 – .008**
Cutting Mode	Wet Cutting	Wet Cutting	Dry Cutting
Results	 When comparing with the conventional product after machining the same number of workpieces, flank wear was smaller and further tool life extension can be expected.	 As compared with the conventional cermet product, higher surface quality and more than 4 times longer tool life was achieved.	 There is no abnormal damage and more than 1.5 times longer tool life was achieved.

The above application examples are customer's applications, so it can be different from the recommended conditions.

GROOVING

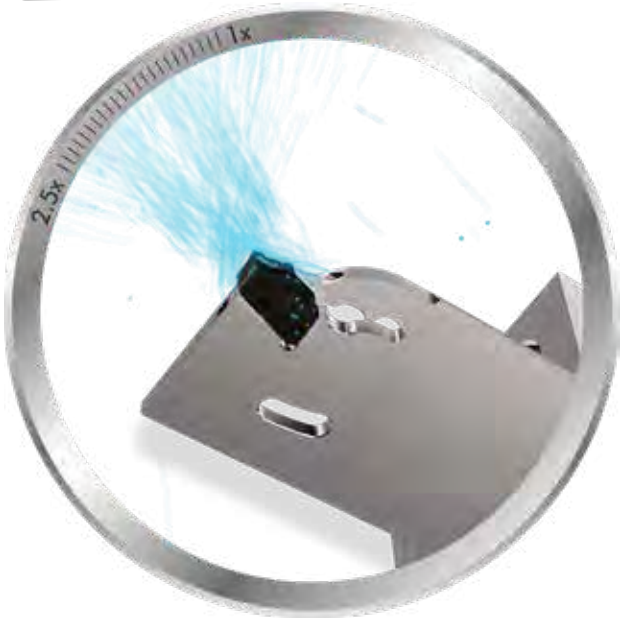
NEW PRODUCT

DIAEDGE

GW SERIES

LONG LASTING & EASY TO USE

cutting off & grooving system

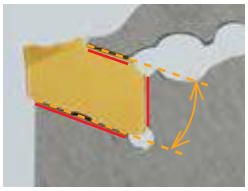


Easy to Utilize Configuration that Improves Tool Handling

Clamp

Simple insert clamping method offering high rigidity.

To prevent the insert from being pulled out during machining a reverse taper angle has been designed from the front of the insert. Additionally the design also includes 3 large locating faces between the insert and the blade offering increased cutting edge reliability. The blade itself is made from a special alloy steel to suit this application.
In respect to insert indexing, a unique wrench is supplied to ensure ease when changing the insert.



Reverse Taper Angle

Voice of Developer

Just how easy is it to set an insert?

With the use of a unique wrench, it is possible to locate and remove the insert with one simple action making it easier for use in the workplace.

GW Series

Simplicity & convenience.
Introducing a new kind of cutting off & grooving system that maximizes usability without sacrificing machining performance.

* See Index on page 4 for table icon reference. (●, ★, □)

Through Coolant Blade

Increased wear resistance due to the use of 2 through coolant ejection holes.

2 through coolant holes supply the coolant to both the rake and flank face, leading to effective cutting edge cooling and increased wear resistance. Additionally this blade can also be used for both low pressure and high pressure coolant (1000 PSI).

Voice of Developer

How is it possible to reduce heat generation?

The 2 coolant holes used in the blade are capable of using high coolant pressures of up (1000 PSI). This is achieved by using as large as possible through coolant hole diameter. The ejection holes are located close to the cutting edge to improve the cutting edge cooling effect and increasing wear resistance.

Coolant Ports

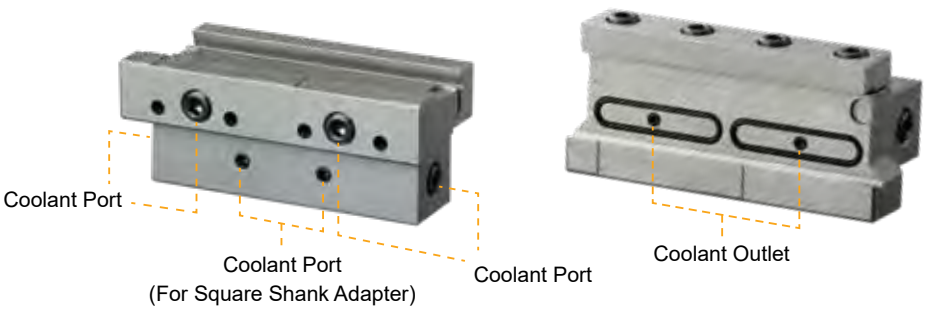
Flexible set up possible with the use of 6 coolant ports.

There are 6 coolant ports designed into the tool block. This makes it easier for the end user to set up the tool block and blade to a configuration that suits their needs. If necessary it is also possible to use coolant hose. The ejection type coolant also improves cutting edge cooling and chip evacuation.

Voice of Developer

Possible set up to suit the requirements of the workplace environment.

One of the objectives of this product is to respond to the customers complaints that “the product did not fit and could not be used”. Starting with the coolant outlet that prevents leaks even when oil quantity or overhangs change. Everything from the material and the shape of the O-ring, to the length of the hose has been tailored to the effective use in the workplace.

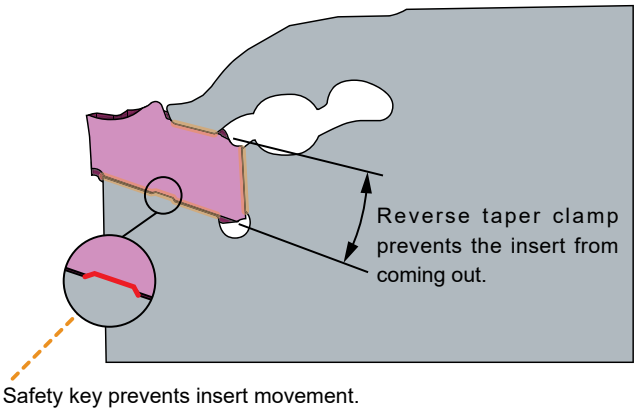


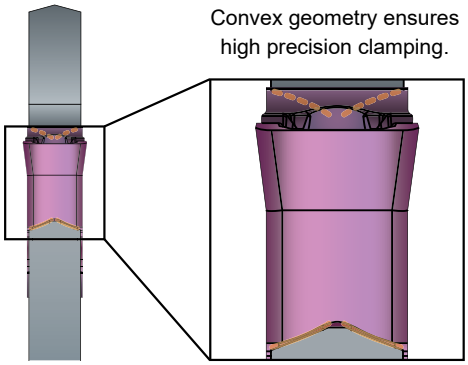
* See Index on page 4 for table icon reference. (●, ★, □)

Simple Insert Clamping Method Offering High Rigidity

Clamp Mechanism

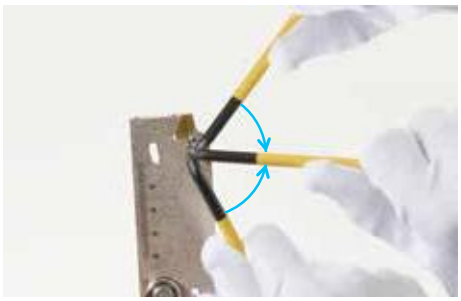
Highly Reliable Insert Clamping

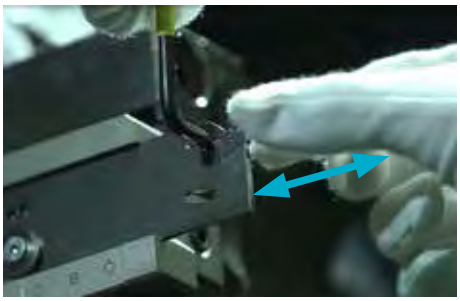




Easy Insert Indexing

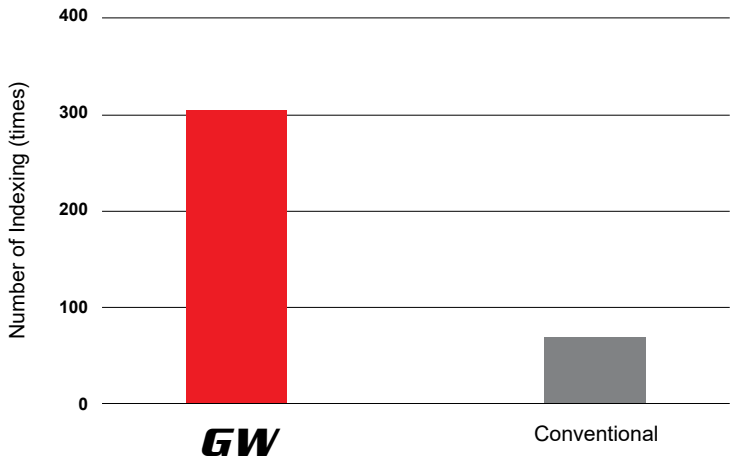
The inserts can be indexed easily with a one action movement of the wrench.





Excellent Clamp Durability

High clamp durability when compared to a conventional tool.



*Based on a .118 inch width insert.

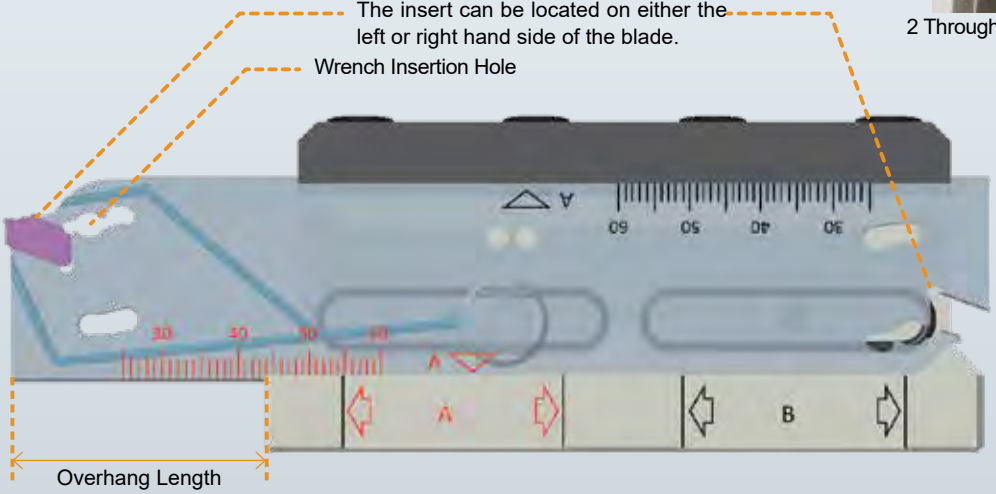
* See Index on page 4 for table icon reference. (●, ★, □)

Suitable for Various Set Ups Improving Tool Handling

Internal Coolant

A scale is marked on the blade to make it easier to set the correct overhang length, as long as the arrow of the blade is set up with an overhang length that is within the band on the tool block then through coolant is possible.
The blade is possible to use with both external or through coolant.

2 Through Coolant Holes



Effects of Through Coolant

Cutting Off

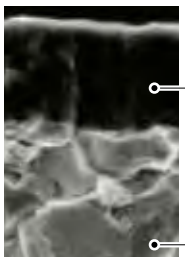
Unstable				

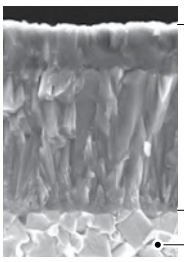
VP20RT (1st Recommendation)



- PVD coated grade suitable for a wide range of applications. The combination of a special tough cemented carbide substrate with MIRACLE coating provides an excellent balance of wear and fracture resistance.

MIRACLE Coating
Carbide Substrate (HRA90.5)

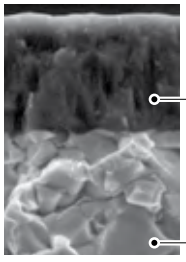
MY5015



- MY5015 is a CVD coated grade with excellent wear resistance even at high temperatures. It provides longer tool life when machining cast and ductile cast irons. Also suitable for high speed continuous cutting of steels.

CVD Coated Carbide
Carbide Substrate

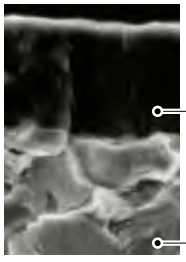
VP10RT



- PVD coated grade with a cemented carbide substrate harder than VP20RT. For use on difficult-to-cut materials and for extending tool life.

MIRACLE Coating
Carbide Substrate (HRA92.0)

VP30RT



- A combination of a tough, special cemented carbide substrate and MIRACLE coating. Ideal for heavy interrupted cutting of stainless and general steels.

MIRACLE Coating (Al,Ti)N
Carbide Substrate

Grooving

GW SERIES

P M K S

GW Blade

- Simple insert clamping method offering high rigidity.
- The blade is possible to use with both external or through coolant.
- Groove Depth CW .079—.197 inch

For External Cutting Off / Grooving

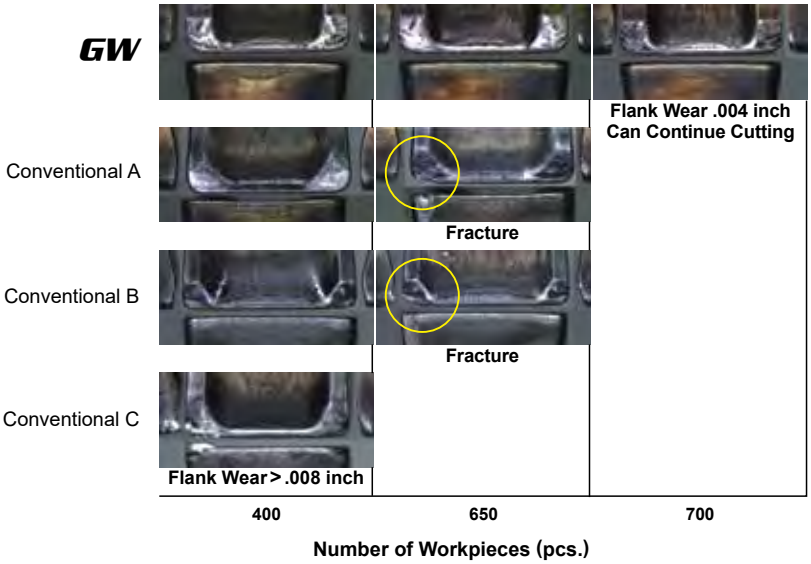
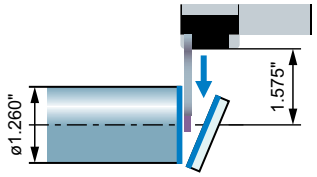
Cutting Performance

Cutting Off of Alloy Steel (AISI 4140)

No abnormal cutting edge damage, possible to extend tool life.

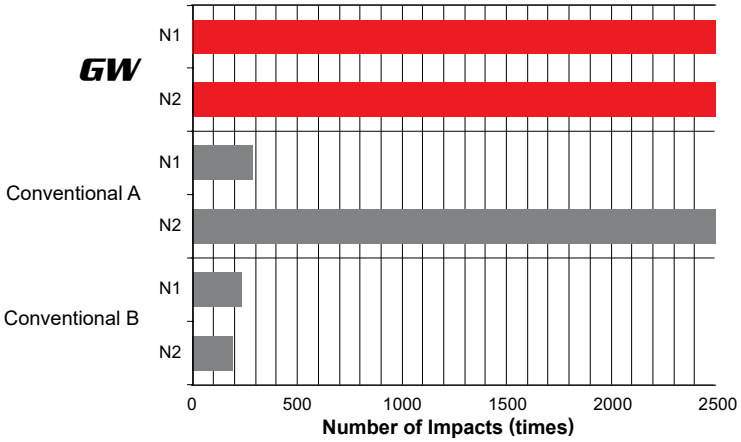


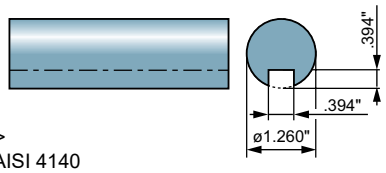


<Cutting Conditions>
Work Material : AISI 4140
Insert : GW1M0300F030N-GM (MY5015)
Grooving Width CW .118 inch
Cutting Speed : vc = 560 SFM
Feed per Rev. : f = .006 IPR
ø.394 inch < .001 IPR
Overhang Length : 1.575 inch
Cutting Mode : Internal Coolant 145 PSI

∗Tool Life Criteria : Flank wear up to .008 inch or fracture.

Interrupted Cutting Off of Alloy Steel (AISI 4140)



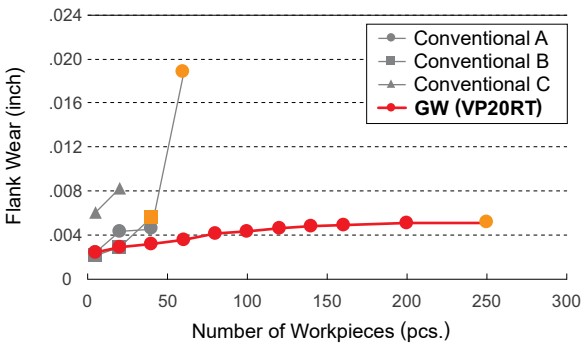


<Cutting Conditions>
Work Material : AISI 4140
Insert : GW1M0300F030N-GM (VP30RT)
Grooving Width CW .118 inch
Cutting Speed : vc = 395 SFM
Feed per Rev. : f = .008 IPR
ø.394 inch < .001 IPR
Overhang Length : 1.181 inch
Cutting Mode : Internal Coolant 145 PSI

∗Tool Life Criteria : Fracture or breakage.

Cutting Off of Stainless Steel (AISI 304)

No abnormal cutting edge damage, 4 times longer tool life was achieved.



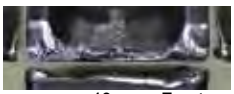
GW

250 pcs. : Normal Wear

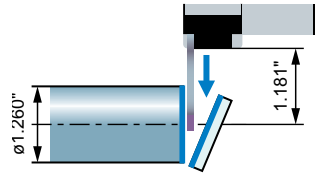
Conventional A

60 pcs. : Fracture

Conventional B



40 pcs. : Fracture



<Cutting Conditions>
Work Material : AISI 304
Insert : GW1M0300F030N-GM (VP20RT)
Grooving Width CW .118 inch
Cutting Speed : vc = 590 SFM
Feed per Rev. : f = .006 IPR
ø.394 inch < .001 IPR
Overhang Length : 1.181 inch
Cutting Mode : Internal Coolant 145 PSI

∗Tool Life Criteria : Flank wear up to .008 inch or fracture.

Application Examples

Insert		GW1M0300F030N-GM(VP20RT)	GW1M0300F030N-GM(VP20RT)
Workpiece		Stainless Steel 	Carbon Tool Steel (AISI W5) Component		Machine Parts	Machine Parts
Cutting Method		Cutting Off	Cutting Off
Cutting Conditions	Cutting Speed **vc** (SFM)	525	590
	Feed per Rev. **f** (IPR)	.004	.005
Cutting Mode		Internal Coolant (290 PSI)	Internal Coolant (72.5 PSI)
Results		As compared to the conventional item, double the tool life was achieved. Additionally due to the use of the unique wrench tool handling was improved. 	A good surface finish was obtained due to smooth chip evacuation when compared to the conventional item. 
Insert		GW1M0300F030N-GM(VP30RT)	GW1M0300F030N-GM(VP20RT)
Workpiece		Carbon Steel (AISI 1045) 	Stainless Steel (JIS SUS420J2) Component		Machine Tool Parts	Machine Parts
Cutting Method		Cutting Off	Cutting Off
Cutting Conditions	Cutting Speed **vc** (SFM)	330	360
	Feed per Rev. **f** (IPR)	.004	.002
Cutting Mode		External Coolant	Internal Coolant
Results		While the conventional item, broke during machining, the GW was able to machine more than double the number of workpieces. 	As compared to the conventional item double the number of workpieces was achieved. 
The above application examples are customer's applications, so it can be different from the recommended conditions.

Multi cutting edge designed for high efficiency machining.
Irregular pitch design prevents chattering.

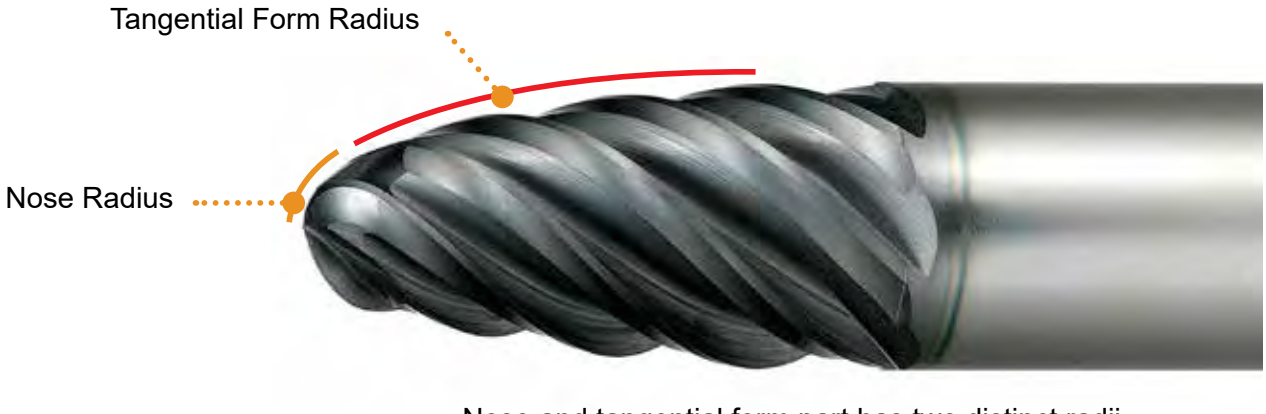
3-flute End Cutting Edge

A wide flute for superior chip evacuation.

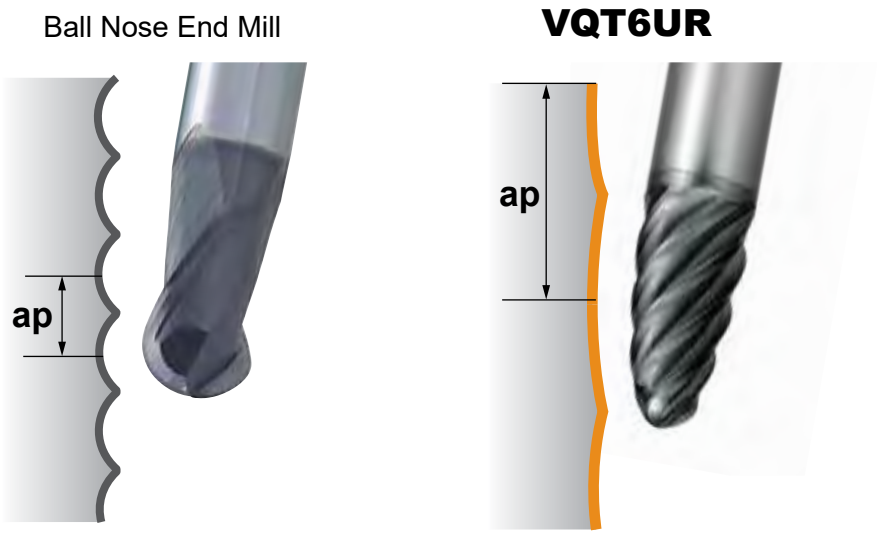
* See Index on page 4 for table icon reference. (●, ★, □)

Ideal Shape

Compared with a ball nose end mill, the tangential form radius is larger and cusp height is minimized and more controllable. This design makes highly efficient machining with a pick feed.



Nose and tangential form part has two distinct radii.



Shorter cutting distance contributes to longer tool life.

DIAEDGE

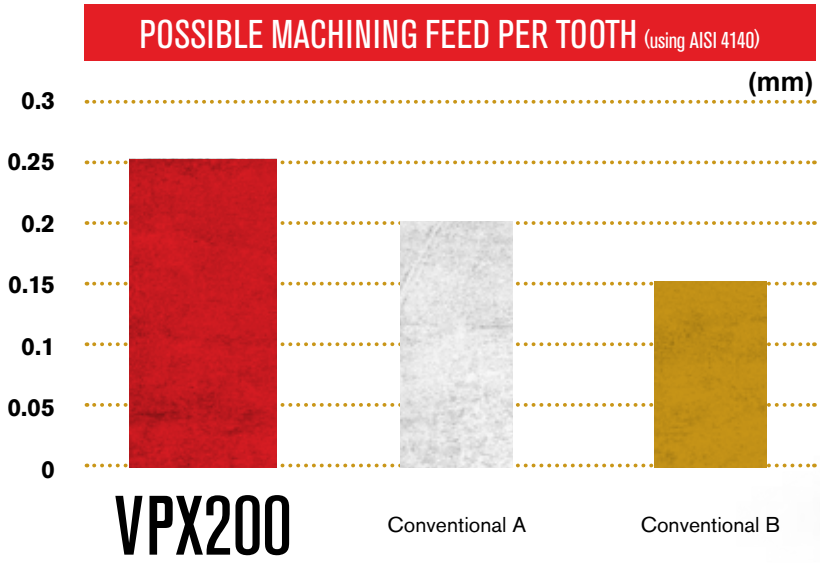
VPX SERIES

MULTI-FUNCTIONAL CUTTER
for high efficiency machining

B250A

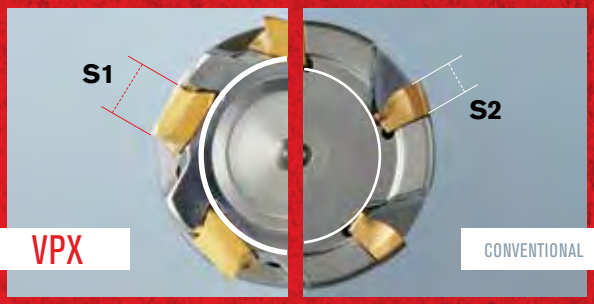
VPX Series

Our thoroughly tested design will completely change how you see the tangential cutter.



ABOUT

PURSUING THE TOUGH MACHINING CHARACTERISTIC OF TANGENTIAL BLADE INSERTS.



By arranging the inserts tangentially, high holder rigidity is secured. Also, because the part subjected to the highest loads during machining is larger (S1>S2), it has great fracture resistance and can be used without worry for high efficiency machining.

The wide seating surfaces provided allow the insert to clamp on more firmly. Suppresses deviation of the insert caused by vibrations during machining.

Comments from developers

DURABILITY BORN THROUGH REPEATED DESTRUCTIVE TESTS.

In order to improve durability, we began development by first applying a load to the cutter until it broke. After analyzing the reasons it broke, we produced an improved version then broke that as well. We repeated this process until we were satisfied with the results. As a result of this pursuit of durability through thorough destructive tests, we were able to come up with a cutter that is ideal for unmanned operation and high efficiency machining.

ABOUT THIS

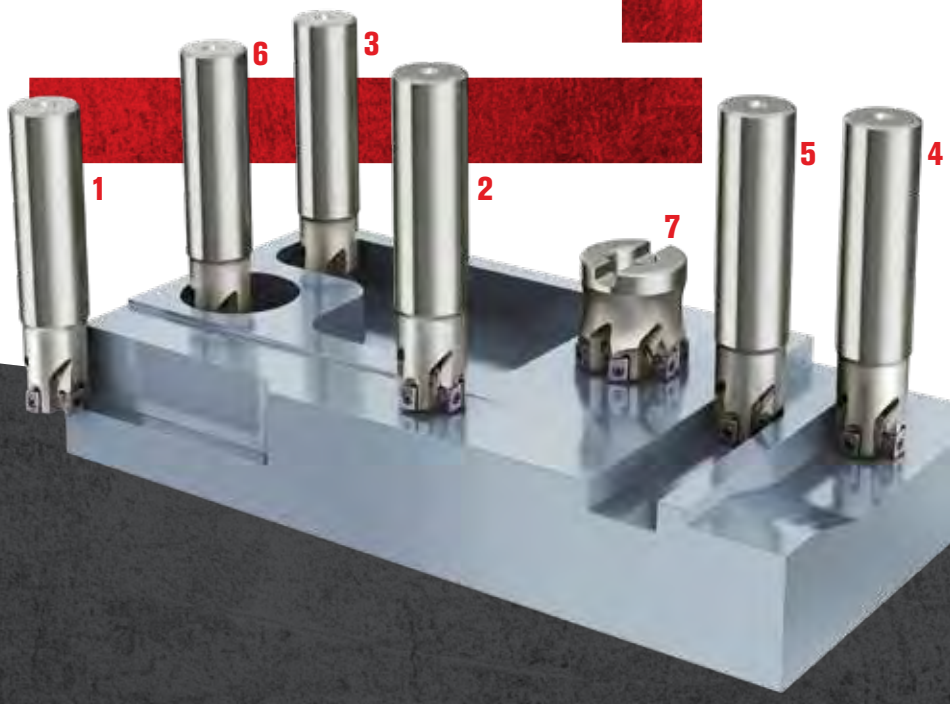
SOLVING PROBLEMS AS A MULTI-FUNCTIONAL CUTTER.

Comments from developers

THROUGH TRIAL AND ERROR, WE'VE SOLVED INDUSTRY PROBLEMS.

The surface-to-surface balance of the insert is what allows the multi-functionality of ramping to be achieved, while maintaining the good chip ejection and the cutting performance inherent to tangential blade cutters. Most tangential blade cutters must be changed out with dedicated inserts for ramping. We made it a priority to unify these two styles of inserts, so as to avoid the trouble of managing two sets of inserts, and prevent installation mistakes.

By focusing on the surface design of these new inserts, and through repeated trial and error, we were able to resolve one of the major issues in the industry.



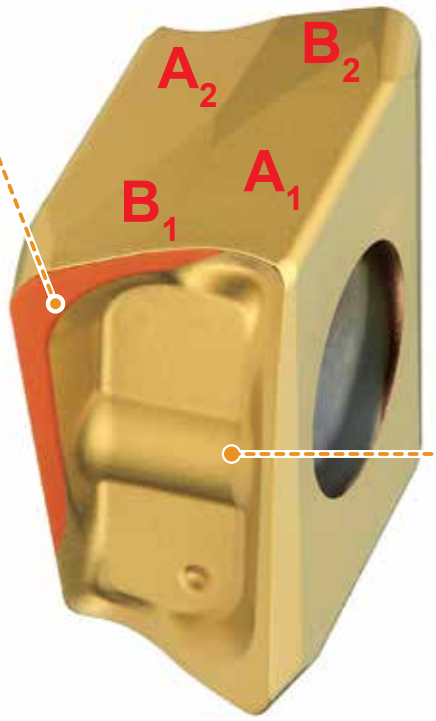
Different types of milling cover a wide variety of applications.

1 Shoulder Milling
2 Ramping
3 Pocket Milling
4 3-D Profile Milling
5 Slot Milling
6 Helical Milling
7 Face Milling

Inserts

Double-sided insert that has revolutionized tangential insert machining.

Single Flat Surface Improves Chip Evacuation and Protects Cutter Body



Two-sided Structure Supports Insert Performance

A Makes Possible Ramping
B Wiper Flats for Good Finish Surface

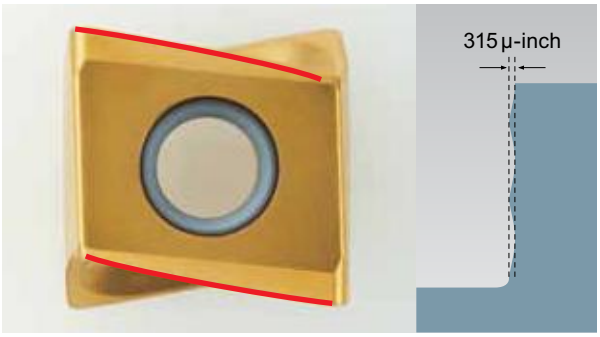
Convex Shaped Insert for Improved Chip Evacuation

Comments from developers

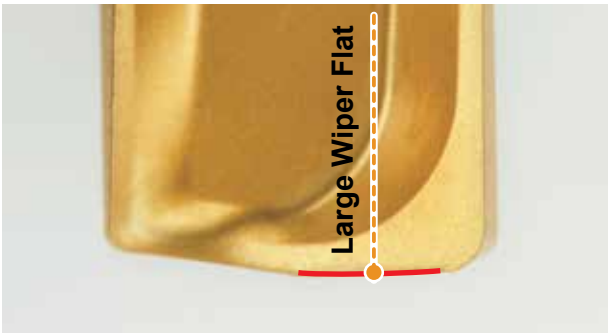
An insert shape that was possible to design, but difficult to commercialize.

The shape of the insert makes it tough while still enabling versatility. We have conquered many challenges from prototype to production--a testimony to Mitsubishi Materials commitment to precision.

Good Wall Surface Finish

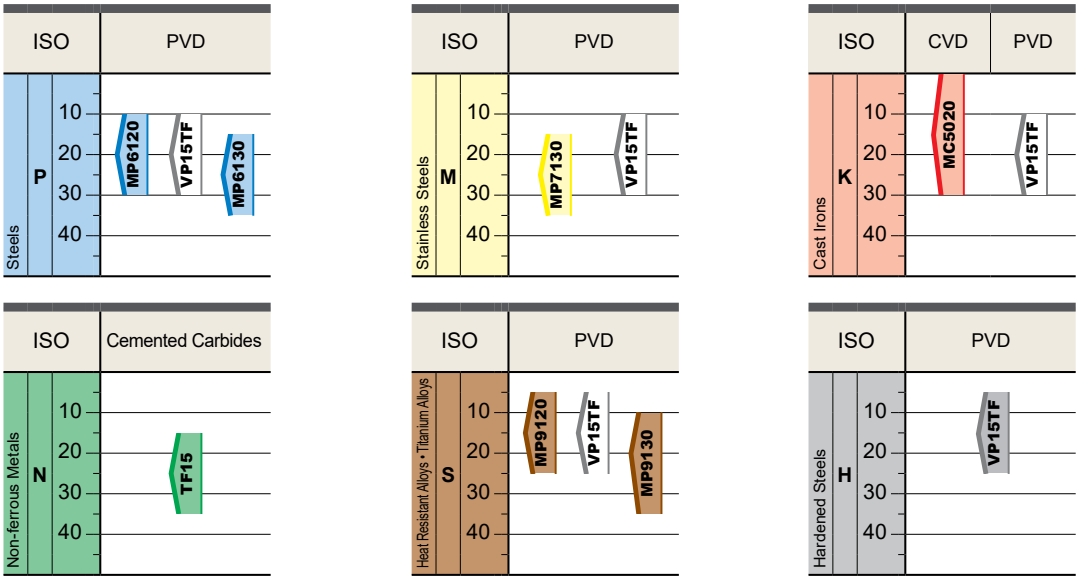


Large Wiper Flats Achieve a Better Finish Surface



* See Index on page 4 for table icon reference. (●, ★, □)

Insert Grades for a Wide Range of Materials



MP6100/MP7100/MP9100 Series

TOUGH-∑ Technology

A fusion of the separate coating technologies; PVD and multilayering provides extra toughness.

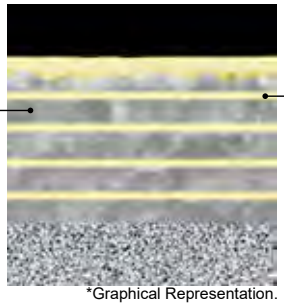
Base Layer
High Al-(Al, Ti)N

The new technology Al-(Al, Ti)N coating provides stabilisation of the high hardness phase and succeeds in dramatically improving wear, crater and welding resistance.

Multilayering of the coating prevents any cracks penetrating through to the substrate.

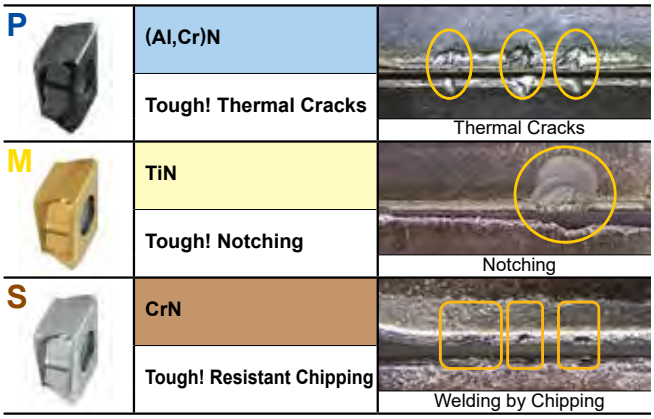
*Graphical Representation.

Al-Ti-Cr-N Based PVD Coating



*Graphical Representation.

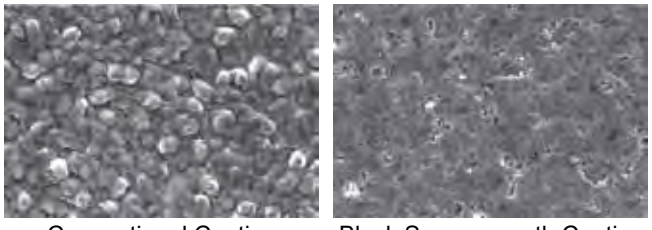
Best Layer of Each Workpiece Material



CVD Coating MC5020

First recommendation for cast irons milling.
MC5020 has excellent wear resistance and also controls thermal cracking and chipping that are common when machining ductile cast irons.

Comparison of Coating Surface



Conventional Coating | Black Super-smooth Coating

Black Super-smooth Coating

Black super-smooth coating prevents abnormal damage such as weld chipping.

How to Install the Screw-in Head

①Thoroughly clean the clamp section of the head and the arbor with an air blower or brush before installation.

②Tighten the head at the recommended torque and ensure that there is no gap between the head and arbor.

Screw Size	Recommended Torque (lbf-ft)	Wrench Size (inch)
M8	**17.0**	.394
M10	**33.9**	.551
M12	**59.0**	.748
M16	**66.4**	.945

- Cutting tools become extremely hot during cutting. Never touch them with bare hands after operation as this may produce risk of injuries or burns.
- Do not handle the cutting tools with bare hands as this may cause injuries.

Note 1) These cutting conditions should be referenced for standard shank types (last letter in designation is S) and arbor shank types. If there is chatter, insert chipping, etc. during machining, alter conditions accordingly.

Note 2) Chattering vibration is more likely under the following circumstances. Use a cut and feed per tooth that are at minimum recommended conditions or below.
- When tool overhang is long (using a long shank, screw-in type, etc.)
- Rigidity of machine, workpiece material or attachment of workpiece material is low
- Corner radius during pocket milling

Note 3) A type with fewer teeth is recommended when the depth of cut in the radius direction (ae) is .5 DC or more.

Note 4) Wet cutting is recommended, when focusing on the surface finish. (Tool life is shorter than for dry cutting.)

Note 5) When using under higher than recommended cutting conditions, or for long periods of time, the clamp screw may become fatigued and break during machining. Please change out the clamp screw periodically.

* See Index on page 4 for table icon reference. (●, ★, □)

Note 1) These cutting conditions should be referenced for standard shank types (last letter in designation is S) and arbor shank types. If there is chatter, insert chipping, etc. during machining, alter conditions accordingly.
Note 2) Chattering vibration is more likely under the following circumstances. Use a cut and feed per tooth that are at minimum recommended conditions or below.
- When tool overhang is long (using a long shank, screw-in type, etc.)
- Rigidity of machine, workpiece material or attachment of workpiece material is low
- Corner radius during pocket milling

Note 3) A type with fewer teeth is recommended when the depth of cut in the radius direction (ae) is .5 DC or more.
Note 4) Wet cutting is recommended, when focusing on the surface finish. (Tool life is shorter than for dry cutting.)
Note 5) When using under higher than recommended cutting conditions, or for long periods of time, the clamp screw may become fatigued and break during machining. Please change out the clamp screw periodically.

* See Index on page 4 for table icon reference. (●, ★, □)

Note 1) These cutting conditions should be referenced for standard shank types (last letter in designation is S) and arbor shank types. If there is chatter, insert chipping, etc. during machining, alter conditions accordingly.
Note 2) Chattering vibration is more likely under the following circumstances. Use a cut and feed per tooth that are at minimum recommended conditions or below.
- When tool overhang is long (using a long shank, screw-in type, etc.)
- Rigidity of machine, workpiece material or attachment of workpiece material is low
- Corner radius during pocket milling

Note 3) A type with fewer teeth is recommended when the depth of cut in the radius direction (ae) is .5 DC or more.
Note 4) Wet cutting is recommended, when focusing on the surface finish. (Tool life is shorter than for dry cutting.)
Note 5) When using under higher than recommended cutting conditions, or for long periods of time, the clamp screw may become fatigued and break during machining. Please change out the clamp screw periodically.

* See Index on page 4 for table icon reference. (●, ★, □)

VPX200

Recommended Cutting Conditions

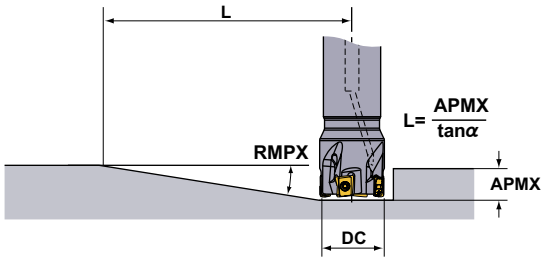
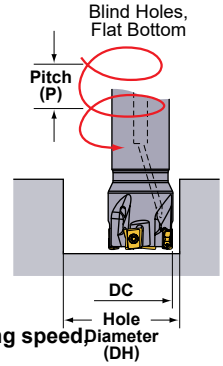
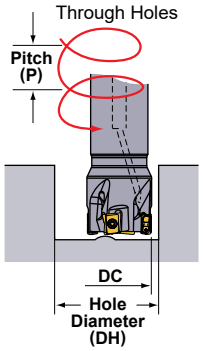
Ramping / Helical Milling

● Ramping



● Helical Milling





Refer to the table below for cutting conditions. For feed per tooth and cutting speed, follow the cutting conditions for slot milling.

(inch)

Cutting Edge Diameter DC	RE	Ramping		Helical Milling (Blind Hole, Flat Bottom)				Helical Milling (Through Hole)	
		Maximum Ramping Angle RMPX	Minimum Distance * L	Maximum Hole Diameter DH max.	Maximum Pitch P max.	Minimum Hole Diameter DH min.	Maximum Pitch P max.	Minimum Hole Diameter DH min.	Maximum Pitch P max.

VPX200

Recommended Cutting Conditions

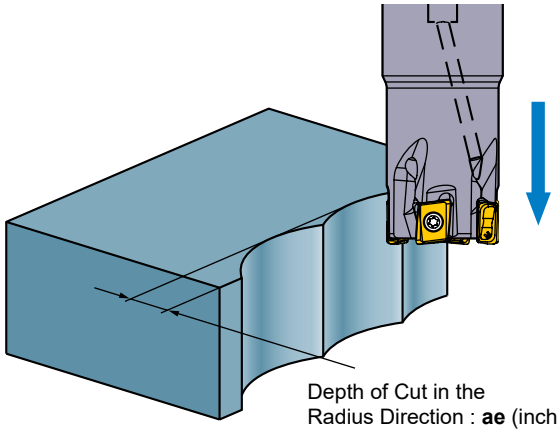
For Plunging and Drilling

See the tables to the right for cutting conditions. Follow the cutting conditions for slot milling regarding feed per tooth and cutting speed.

● **Plunging**

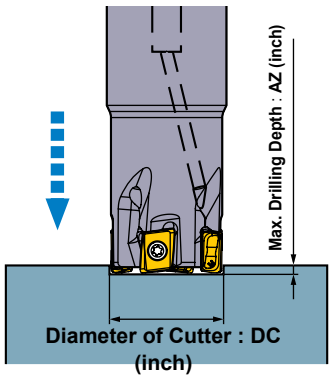


(inch)

DC	ae max.
.625	.154
.750	.154
.875	.157
1.000	.157
1.125	.157
1.250	.157
1.375	.157
1.500	.157
2.000	.157
2.500	.157

Note 1) No step feed necessary.

● **Drilling**



(inch)

DC	AZ max.
.625	.012
.750	.012
.875	.012
1.000	.012
1.125	.012
1.250	.012
1.375	.012
1.500	.012
2.000	.012
2.500	.012

Note 1) Exercise due caution as chips scatter easily.
Note 2) Use compressed air to eliminate chips (or coolant for when machining aluminum alloy).

* See Index on page 4 for table icon reference. (●, ★, □)

Note 1) These cutting conditions should be referenced for standard shank types (last letter in designation is S) and arbor shank types. If there is chatter, insert chipping, etc. during machining, alter conditions accordingly.
Note 2) Chattering vibration is more likely under the following circumstances. Use a cut and feed per tooth that are at minimum recommended conditions or below.
- When tool overhang is long (using a long shank, screw-in type, etc.)
- Rigidity of machine, workpiece material or attachment of workpiece material is low
- Corner radius during pocket milling

Note 3) A type with fewer teeth is recommended when the depth of cut in the radius direction (ae) is .5 DC or more.
Note 4) Wet cutting is recommended, when focusing on the surface finish. (Tool life is shorter than for dry cutting.)
Note 5) When using under higher than recommended cutting conditions, or for long periods of time, the clamp screw may become fatigued and break during machining. Please change out the clamp screw periodically.

Note 1) These cutting conditions should be referenced for standard shank types (last letter in designation is S) and arbor shank types. If there is chatter, insert chipping, etc. during machining, alter conditions accordingly.
Note 2) Chattering vibration is more likely under the following circumstances. Use a cut and feed per tooth that are at minimum recommended conditions or below.
- When tool overhang is long (using a long shank, screw-in type, etc.)
- Rigidity of machine, workpiece material or attachment of workpiece material is low
- Corner radius during pocket milling

Note 3) A type with fewer teeth is recommended when the depth of cut in the radius direction (ae) is .5 DC or more.
Note 4) Wet cutting is recommended, when focusing on the surface finish. (Tool life is shorter than for dry cutting.)
Note 5) When using under higher than recommended cutting conditions, or for long periods of time, the clamp screw may become fatigued and break during machining. Please change out the clamp screw periodically.

* See Index on page 4 for table icon reference. (●, ★, □)

VPX300

Recommended Cutting Conditions

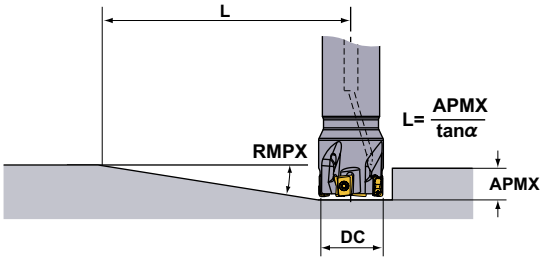
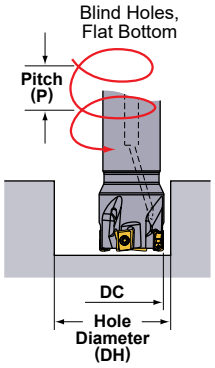
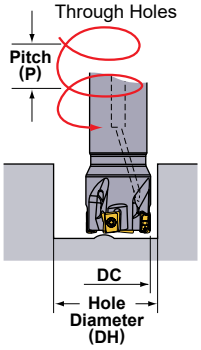
Ramping / Helical Milling

● Ramping



● Helical Milling





Refer to the table below for cutting conditions. For feed per tooth and cutting speed, follow the cutting conditions for slot milling.

(inch)

Cutting Edge Diameter DC	RE	Ramping		Helical Milling (Blind Hole, Flat Bottom)				Helical Milling (Through Hole	
		Maximum Ramping Angle RMPX	Minimum Distance * L	Maximum Hole Diameter DH max.	Maximum Pitch P max.	Minimum Hole Diameter DH min.	Maximum Pitch P max.	Minimum Hole Diameter DH min.	Maximum Pitch P max.

VPX300

Recommended Cutting Conditions

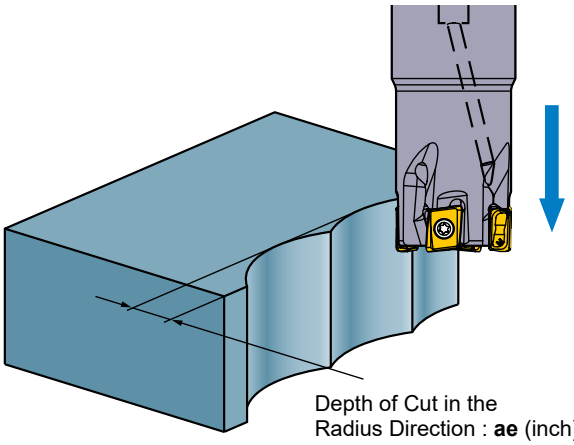
For Plunging and Drilling

See the tables to the right for cutting conditions. Follow the cutting conditions for slot milling regarding feed per tooth and cutting speed.

● **Plunging**



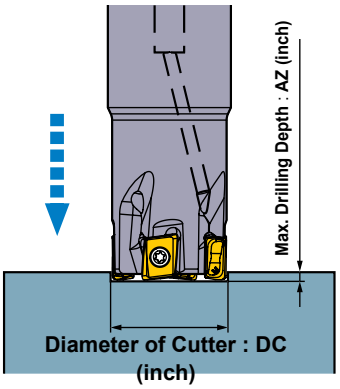
Depth of Cut in the Radius Direction : **ae** (inch)

(inch)

DC	ae max.
1.000	.256
1.125	.260
1.250	.260
1.375	.260
1.500	.264
2.000	.264
2.500	.264
3.000	.264

Note 1) No step feed necessary.

● **Drilling**



(inch)

DC	AZ max.
1.000	.022
1.125	.022
1.250	.022
1.375	.022
1.500	.022
2.000	.022
2.500	.022
3.000	.022

Note 1) Exercise due caution as chips scatter easily.
Note 2) Use compressed air to eliminate chips (or coolant for when machining aluminum alloy).

* See Index on page 4 for table icon reference. (●, ★, □)

Application Examples

Holder		VPX200R2503SA25S	VPX200R1602SA16S	VPX200R1602SA16S
Insert (Grade)		LOGU0904080PNER-M(MP6120)	LOGU0904080PNER-M(MP6130)	LOGU0904080PNER-M(MP7130)
Workpiece		AISI 1045 	JIS SS400 	JIS SS400+Stainless Steel Component		Chucked Parts	Machined Parts	Machined Parts
Cutting Conditions	Cutting Speed (SFM)	490	280	655
	Feed per Tooth (IPT)	.0043	.0037	.0039
	Depth of Cut (inch)	ap = .177 , ae = .984 Max.	ap = .167	ap = .059—.118
Cutting Mode		Dry Cutting	Wet Cutting	Wet Cutting
Results		Compared with conventional product with varying insert tool life due to breakage, VPX has a stable insert tool life that allows for 1.7X more machining.	Solves the problem of easily damaged clamp screws for conventional product, ensuring an excellent finish.	The number of machining has achieved more than 3X the tool life of the conventional product caused by the defect, and the finished surface is also improved.

Holder		VPX200R2003SA20S	VPX200R2504SA25S	VPX200R2504SA25S
Insert (Grade)		LOGU0904080PNER-M(MP6120)	LOGU0904080PNER-M(MP6120)	LOGU0904080PNER-M(MP6120)
Workpiece		20MnCr5(Alloy Steel) 	Cast Iron 	Carbon Steel Component		Machined Parts	Automotive Components	Machined Parts
Cuttin Conditions	Cutting Speed (SFM)	575	655	335
	Feed per Tooth (IPT)	.0070	.0068	.0051
	Depth of Cut (inch)	ap = .079	ap = .118	ap = .055 , ae = .433
Cutting Mode		Dry Cutting	Dry Cutting	Wet Cutting
Results		Conventional product has achieved machining times of 330 min before breaking, whereas VPX can maintain sustained machining for over 400 mins.	It is capable of cutting speeds of 655 SFM compared to 560 SFM for conventional product, increasing machining efficiency. Good machining accuracy makes possible stable machining.	VPX has less load on its main shaft than conventional product, achieving more than 3X as much machining. It also has excellent clamp rigidity compared to other conventional product suppressing clamp screw breakage.

The examples shown are actual applications and can differ from the recommended cutting conditions.

* See Index on page 4 for table icon reference. (●, ★, □)

Application Examples

Holder	VPX200R3004SA25S	VPX200-050A05AR	VPX200R2503SA25S
Insert (Grade)	LOGU0904080PNER-M(MP9130)	LOGU0904040PNER-M(VP15TF)	LOGU0904080PNER-M(MP6120)
Workpiece	Precipitation Hardening Stainless Steel (38-43HRC) 	AISI 60-40-18 	JIS SS400, AISI 1050 Component	Machined Parts	Parts	Machined Parts
Cutting Conditions: Cutting Speed (SFM)	130	1130	385
Cutting Conditions: Feed per Tooth (IPT)	.0024	.0055	.0063
Cutting Conditions: Depth of Cut (inch)	ap = .071	ap = .079—.118 , ae = 1.575	ap = .236
Cutting Mode	Dry Cutting	Wet Cutting	Dry Cutting
Results	Good sharpness compared to conventional product allows VPX to achieve 2X their insert tool life.	Conventional product can only be used for roughing, but VPX can be used for finishing as well, eliminating processing steps.	VPX achieves better chip evacuation and better surface finish compared to conventional product, better insert tool life.

Holder	VPX200R2503SA25S	VPX300R4004SA32S	VPX300-080A10AR
Insert (Grade)	LOGU0904040PNER-M(MP7130)	LOGU1207080PNER-M(MP6120)	LOGU1207080PNER-M(MP6120)
Workpiece	AISI 304 	AISI 4140 	Alloy Tool Steel Component	Machined Parts	Center Block	Machined Parts
Cutting Conditions: Cutting Speed (SFM)	590	490	740
Cutting Conditions: Feed per Tooth (IPT)	.0236	.0059	.0051
Cutting Conditions: Depth of Cut (inch)	ap = .106	ap = .197	ap = .197 , ae = 2.756
Cutting Mode	—	Dry Cutting	—
Results	Less cutting noise than conventional product, allowing cutting conditions to be improved. Also, insert tool life has been lengthened when using the same inserts to machine AISI 1045.	Compared to conventional product, less vibration and good wall surface finish, achieving more than 3X insert tool life.	The number of machining has achieved 2.7X the tool life of the conventional product caused by finish degradation.

The examples shown are actual applications and can differ from the recommended cutting conditions.

* See Index on page 4 for table icon reference. (●, ★, □)

Application Examples

Holder		VPX300R4004SA32S	VPX300R2502SA25S	VPX200R2504SA25S
Insert (Grade)		LOGU1207080PNER-M(MP6120)	LOGU1207080PNER-M(VP15TF)	LOGU0904080PNER-M(MP6120)
Workpiece		13CrMo4-5 	Alloy Tool Steel (55HRC) 	AISI 1049 Hardening Component		**Machined** Parts	**Dies**	**Dies**
Cutting Conditions	Cutting Speed (SFM)	**525 → 590**	**230**	**655**
	Feed per Tooth (IPT)	**.0047 → .0059**	**.0031**	**.0059**
	Depth of Cut (inch)	**ap = .118 → .165 , ae = 1.575**	**ap = .197 , ae = .738**	**ap = .118**
Cutting Mode		**Wet Cutting**	**Dry Cutting**	**Dry Cutting**
Results		Achieves 2X the insert tool life of conventional product, even when changing to high efficiency conditions.	When machining hardened steel, it achieves 2X the machining of conventional product whose insert tool life is limited by defects.	There is no seating flattening or deformation even when machining for 2500 minutes. And the number of tools has been reduced by increasing corner count to four.

The examples shown are actual applications and can differ from the recommended cutting conditions.

NEW PRODUCT

DIA EDGE

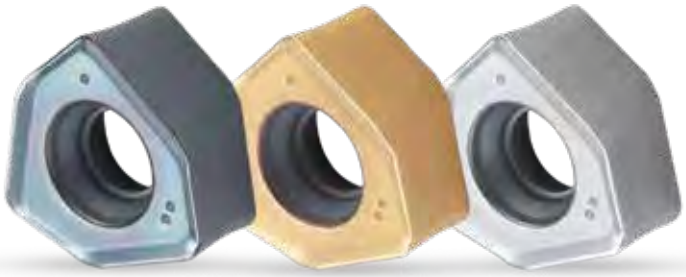
WJX SERIES

Double-sided Insert Type High Feed Radius Milling Cutter

improved sharpness & stability

WJX Series

High feed radius milling cutter, with stronger double-sided insert type. Experiences low cutting resistance on start up, maintains stable machining even during interrupted machining and large depth of cut.



B235A

Reliable Milling Cutter even in High Efficiency Machining

Covers both high feed and large depth of cut, for high efficiency machining.
Economical double-sided insert provides the capability for multi-functionality.
Provides e xcellent sharpness and gives a long tool life, reducing cutting noise.
The WJX series was developed for creating reliable and economical tools even in high efficiency machining.

Unconventional Cutting Edge Design for Stable Milling

Wiper Cutting Edge

The wiper edge offers good surface finishes sufficient for rough machining.

Straight Cutting Edge

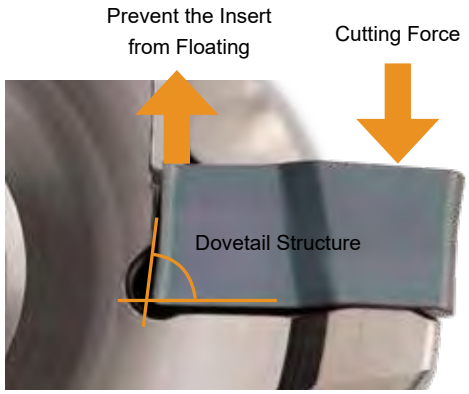
The straight cutting edge extending to the maximum depth of cut (APMX) allows for high feed machining even at large depths of cut.

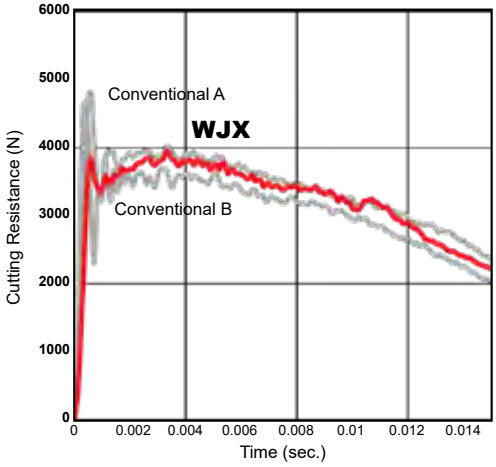
Minor Cutting Edge

Stable chip formation is possible with the straight cutting edge even at high ramping angle.

Highly-reliable Clamping System

The dovetail structure prevents the insert from floating and gives stable clamping without using a clamp bridge.





Workpiece Material : AISI 4140
Cutter Dia. : DCX=ø2.48"
Cutting Speed : vc=490 SFM
Feed per Tooth : fz=.059 IPT
Depth of Cut : ap=.059"
Width of Cut : ae=1.24"
Cutting Mode : Single Insert

WJX produces low cutting resistance when entering the cut.

* See Index on page 4 for table icon reference. (●, ★, □)

Complex Shape Flank Face Suitable for Ramping

The flank shape combines the strength and economy of negative inserts, with the sharpness and multi-functionality of positive inserts.

Single-sided : Positive Insert
Ramping Performance
Sharpness

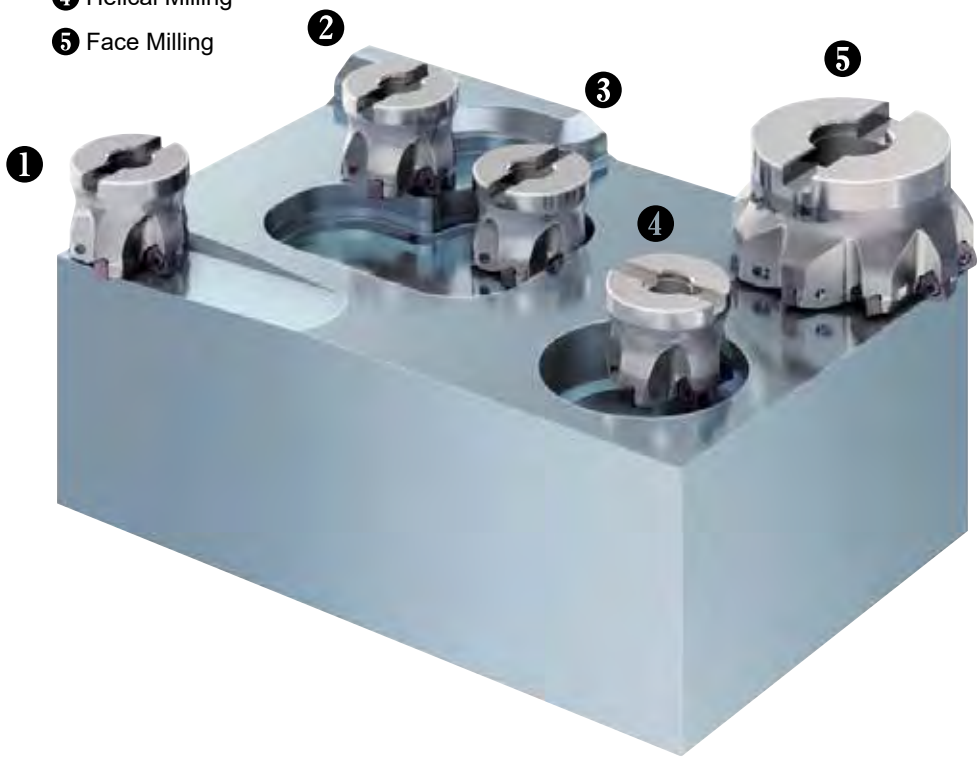
Fracture Resistance

Different Types of Milling Cover a Wide Variety of Situations

❶ Ramping
❷ Shoulder Milling
❸ Pocket Milling
❹ Helical Milling
❺ Face Milling



* See Index on page 4 for table icon reference. (●, ★, □)

High Strength Insert with Increased Insert Thickness

Increased thickness prevents the inserts from fracturing and makes the cutter body resistant to breakage.

WJX

Cutting Length
15.748 feet

Conventional

Cutting Length
11.811 feet

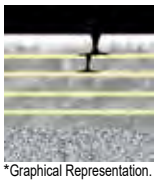
MP6100/MP7100/MP9100 Grades

TOUGH-Σ Technology

A fusion of the separate coating technologies; PVD and multi-layering provides extra toughness.

Base Layer
High Al-(Al, Ti)N

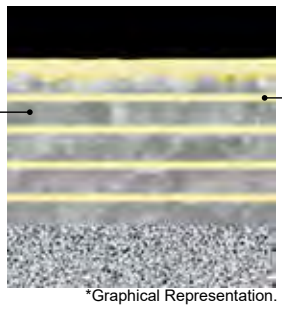
The new technology Al-(Al, Ti)N coating provides stabilisation of the high hardness phase and succeeds in dramatically improving wear, crater and welding resistance.



Multi-layering of the coating prevents any cracks penetrating through to the substrate.

*Graphical Representation.

Al-Ti-Cr-N Based PVD Coating



*Graphical Representation.

Best Layer of Each Workpiece Material

P 	(Al,Cr)N Tough! Thermal Cracks	 Thermal Cracks
M 	TiN Tough! Notching	 Notching
S 	CrN Tough! Resistant Chipping	 Welding by Chipping

VP15TF

Stable machining properties are enabled when the coating is combined with a high wear and fracture resistant carbide substrate.

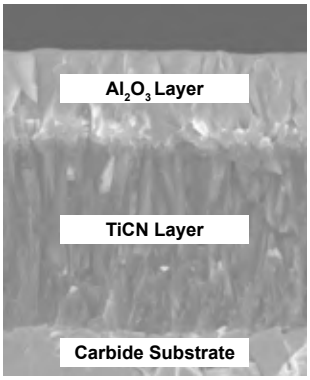
VP30RT

Ideal for heavy interrupted cutting of stainless and general steels because of the excellent fracture resistance properties.

CVD Coated Grade for Milling of Steels and Stainless Steels

MC7020 NEW

MC7020 suppresses crater wear which occurs in high speed cutting, and achieves stable processing in high efficiency machining.



Structure of **MC7020**

Improved Wear Resistance

The micro-grain wear resistant Al_2O_3 and fibrous TiCN layers deliver excellent wear resistance in high speed cutting.

Improved Fracture Resistance

Use of a specially developed cemented carbide that provides superior resistance to fracture and thermal cracking prevents the cutting edge from sudden fracturing.

Reduced Abnormal Damage

An extremely smooth black super-smooth coating prevents abnormal damage such as chip welding.

All Black Super-smooth Coating

This smooth outer layer helps to prevent chip welding.

Note 1) To discharge chips effectively, use an air blow when machining. When the air blow is less effective at discharging chips, we recommend wet cutting.
Note 2) When wet cutting, tool life may become shorter than dry cutting. When carrying out wet cutting for the applications recommended with dry cutting, reduce the cutting speed by 25%.
Note 3) When large vibration occurs, reduce the cutting conditions.
Note 4) For interrupted cutting, reduce the cutting speed and feed rate by 20%.

* See Index on page 4 for table icon reference. (●, ★, □)

DCX = Cutting Dia. Max. **DC = Cutting Dia.** **DH = Desired Hole Dia.**
APMX = Depth of Cut Max. **RMPX = Ramping Angle Max.** **AZ = Plunge Depth Max.**

Note 1) When ramping and helical milling, it is recommended to reduce the feed per tooth.
Note 2) When ramping, helical milling and drilling, long continuous chips may be scattered so please be careful.

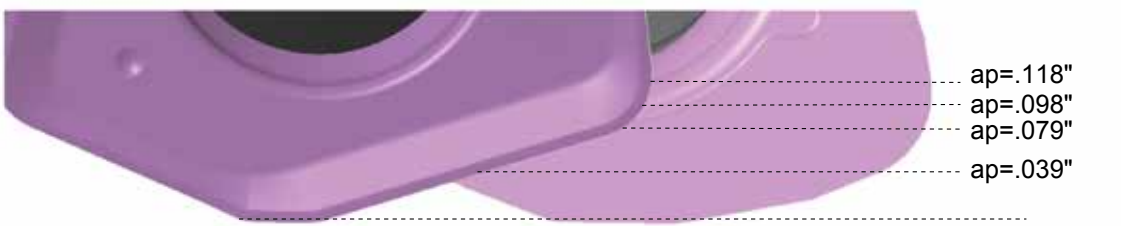
<Helical Milling>
To obtain a flat bottom surface when helical milling, it requires to remove "the uncut part" in the center of the workpiece material at a final pass.
When helical milling, make sure that the depth of cut per helical pass doesn't exceed the maximum depth of cut (APMX).
<Drilling>
When drilling, set the axial feed per revolution at .008 IPR or less.

* See Index on page 4 for table icon reference. (●, ★, □)

Operational Guidance

Depth of Cut

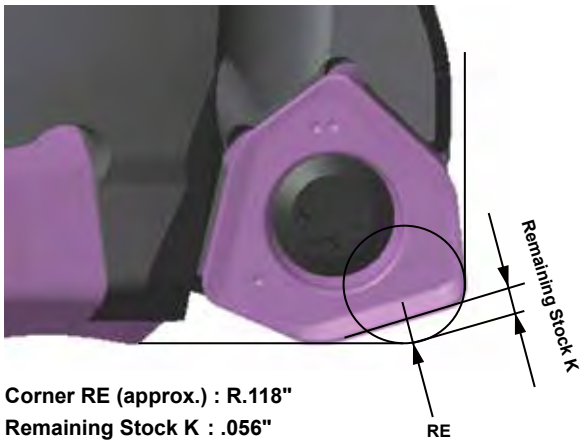
The straight cutting edge is .079" at maximum depth of cut (APMX).
When plane cutting steels and cast irons, the depth of cut can be set at up to .118" until you reach the corner radius.
When you exceed .079", you will need to decrease the feed rate. See the cutting conditions on page 15 for reference.



WJX Conventional

Remaining Stock

When using the WJX, please program as a radius cutter.
The approximate remaining stock **K** for the program is shown below.
Also see the table on the right for the remaining stock **H** of the vertical wall.



Corner RE (approx.) : R.118"
Remaining Stock K : .056"

Instructions for Use of Wiper Inserts

- Wiper inserts for WSX445 are two-cornered. Please set as shown in Fig.1.
- Excellent surface finish can be achieved with one wiper.
- Set more than 2 wiper inserts, equally spaced, when the feed per revolution is larger than .315 IPR.

DRILLING

NEW PRODUCT

DIA EDGE

DLE SERIES

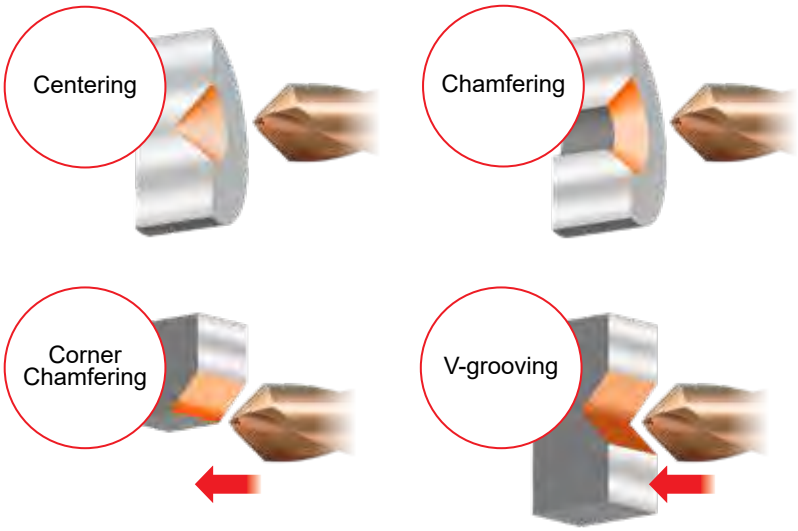
SOLID CARBIDE DRILLS

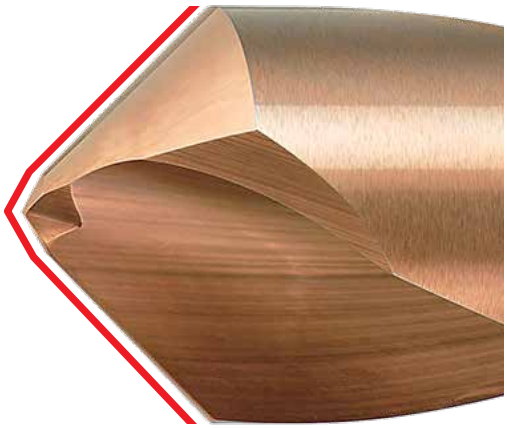
for centering & chamfering

B223A

Leading Drill Series

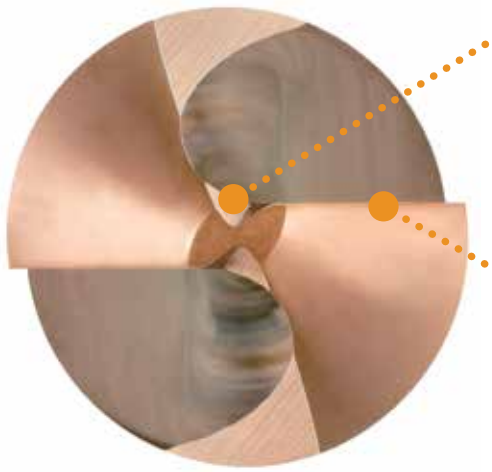
Completes strict standards for centering and chamfering.





Range of Use

Features



Thinning Geometry

The thinning pocket promotes smooth chip evacuation and provides excellent hole position accuracy. Additionally, the negative cutting edge of the drill point offers high cutting edge strength.

Sharp Cutting Edge and High Fracture Resistance

Sharp cutting edge shape and high fracture resistance, stable cutting and burr prevention are possible.

DLE

Conventional

Drilling

Two-step Point Angles

Two-step point angles ensure strength at the center and prevents sudden fracturing.

*The central area will not have a 90° bottom hole angle.

DLE

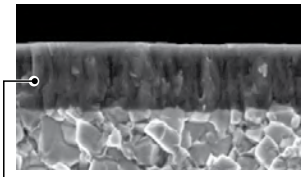
High Strength of Center

Conventional

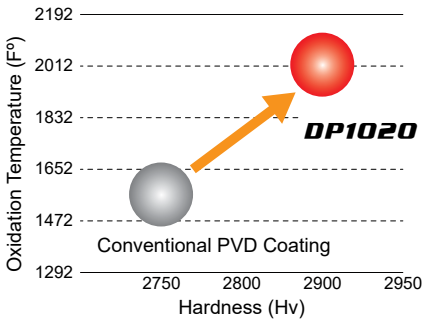
Fractures of Center

Coated Grade DP1020

DP1020 grade offers excellent wear resistance and reduced friction for longer tool life and a versatile range of applications.



With Accumulated Al-Ti-Cr-N Based PVD Coating



Extensive Support for CNC Automatic Lathes

Diverse lineup of shanks compatible with ER collets.

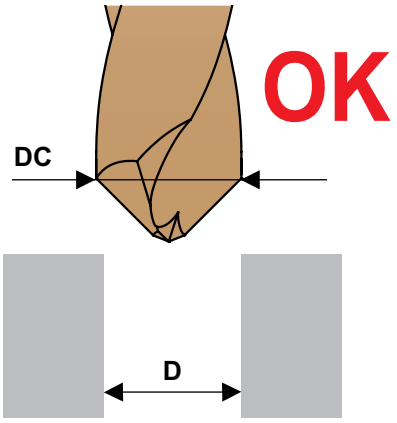
(Note 1) In the region of roughly DC/4, which is the region of the two-step point angles, the central area will not have a 90° bottom hole angle. Chamfering will also not be possible in this region.

(Note 2) The centering diameter should be less than the drill diameter (processing diameter) DC and the usable length LU should be referred to as a guideline.

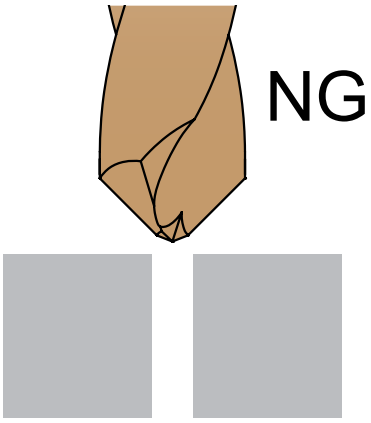
Drill Diameter Selection

When Chamfering

With respect to guide hole diameter **D**, select the drill diameter (cutting diameter) **DC** to be within the range of **D** < **DC** < 2**D**.

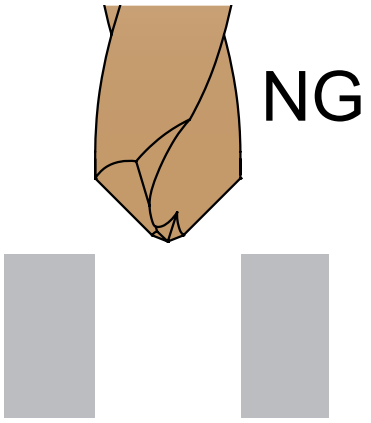


Example) If guide hole diameter **D** is .197": Drill diameter **DC** should be equal to or greater than .236" but less than .394". Select a **DC** of .236", .276", or .315".



If DC is equal to or greater than 2D:

If drill diameter **DC** is too large compared to guide hole diameter **D** (equal to or greater than 2**D**), chamfering cannot be performed.

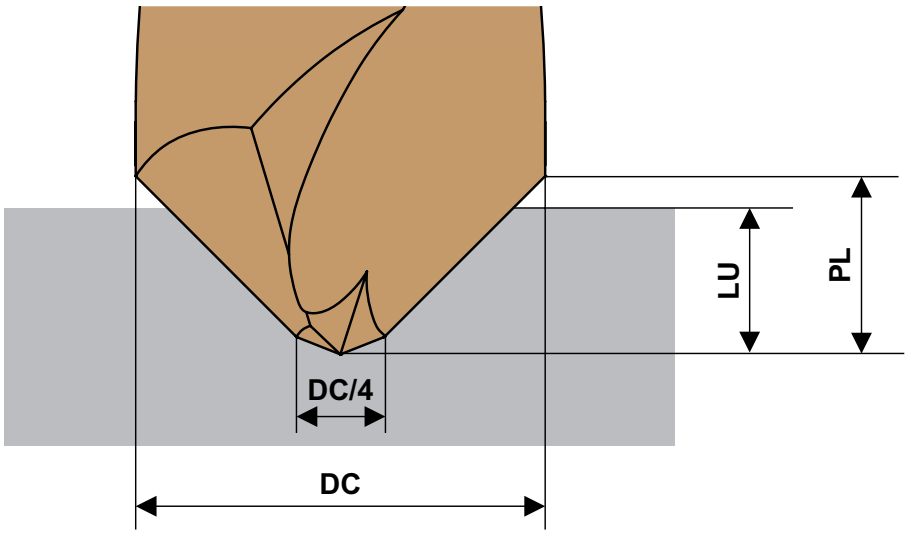


If DC is a drill diameter equal to D:

Chamfering cannot be performed if drill diameter **DC** is the same as guide hole diameter **D**.

When Centering

The tool cannot be used for processing if the centering diameter has the same guide hole diameter as drill diameter **DC**. Refer to the usable length **LU** (page 179) as a guideline.
In the region of roughly **DC**/4, which is the region of the two-step point angles, the central area will not have a 90° bottom hole angle.



* See Index on page 4 for table icon reference. (●, ★, □)

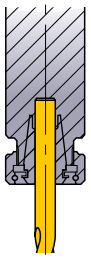
(Note 1) When chamfering a circumference of a guide hole, make sure that the tool diameter(DC) is D <DC <2D.
(Note 2) When V-grooving and chamfering, please reduce cutting conditions.

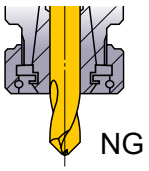
Operational Guidance

Drill Holding



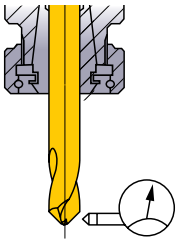
Collet chuck holds the drill securely.

Drill Installation



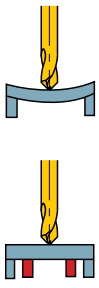
Do not clamp on the flutes.

Installation Tolerance

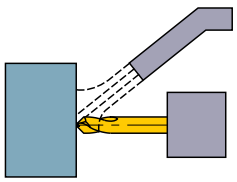


Run-out ≤ .001 inch

Thin Workpiece



Coolant Method



Coolant positions,at the end at the center are ideal.

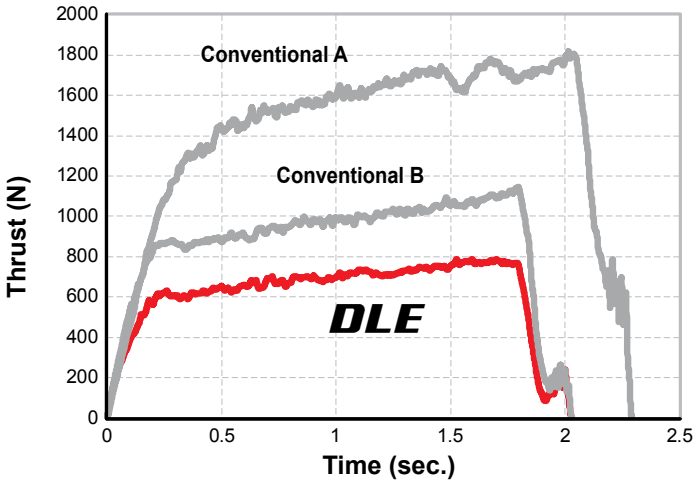
Drilling

* See Index on page 4 for table icon reference. (●, ★, □)

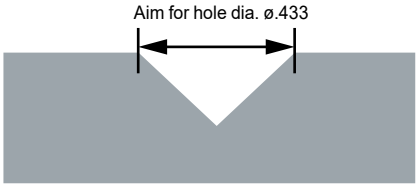
Cutting Performance

Comparison of Cutting Performance during Centering

Ideal for processing at low power, when compared to conventional products.



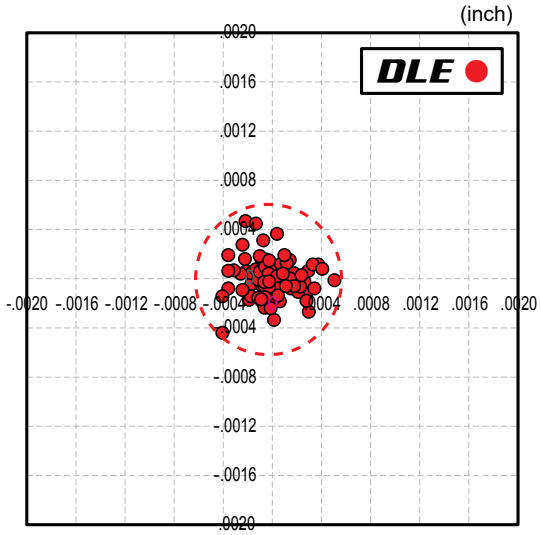
<Cutting Conditions>
Work Material : AISI 1045
Drill : DLE1200S120P090
ø.472"
Cutting Speed : vc = 195 SFM
Feed per Rev. : fr = .0024 IPR"
Cutting Mode : Wet Cutting
External Coolant
(Chlorine Free Emulsion)
Machine : Vertical MC



***Differences along the time axis are a result of differences in processing depth.**

Centering Hole Position Precision for 400 Series Stainless

Stainless steels are likely to experience abnormal damage from build-up edge. Compared to conventional products which often suffered early fractures, the DLE has longer tool life.



<Cutting Conditions>
Work Material : 420 Stainless
Drill : DLE0600S060P090
Cutting Speed : vc=50 SFM
Feed per Rev. : fr = .0016 IPR
Hole Depth : Aim for hole dia. ø.217"
Cutting Mode : Wet Cutting
External Coolant
(Chlorine Free Emulsion)
Machine : Vertical MC

DLE

After 90 Holes

Conventional A

Measurement impossible due to early fracture

Conventional B

Measurement impossible due to early fracture

* See Index on page 4 for table icon reference. (●, ★, □)

Application Examples

Drill		DLE0400S040P090	DLE0600S060P090
Workpiece		**AISI 1010 (Equipment Parts)**  	**AISI 304 (Machine Parts)**  Centering and Chamfering
Cutting Conditions	Cutting Speed **vc** (SFM)	**100**	**80**
	Feed per Rev. **fr** (IPR)	**.0018**	**.0020**
	Guide Hole Dia. (inch)	**ø.118**	**ø.197**
Cutting Mode		**Wet Cutting Extarnal Coolant (Chlorine Free Emulsion)**	**Wet Cutting Extarnal Coolant (Water-insoluble)**
Machine		**NC Lathe, Tool Rotation**	**CNC Automatic Lathe**
Results		 Burrs are suppressed Compared to conventional products, the DLE has smaller burrs and a longer expected life.	 More than 200 holes Good surface finishes and no tool damage While conventional products often caused chipping to occur, the DLE is more stable and has been used to complete drilling of 200 holes with no damage on the cutting edge.

Drill		DLE0300S030P090
Workpiece		**AISI 303 (Engine Parts)**  
Cutting Conditions	Cutting Speed **vc** (SFM)	**80**
	Feed per Rev. **fr** (IPR)	**.0016**
	Guide Hole Dia. (inch)	**ø.079**
Cutting Mode		**Wet Cutting Extarnal Coolant** (Water-insoluble) Curved Surface
Machine		**CNC Automatic Lathe**
Results		**DLE**  **After 60 Holes** **Conventional**  **After 1 Hole** While conventional products generated burrs after the first hole, the DLE achieved 60 holes without noticable damage and burrs, plus provided excellent surface finish.

The above application examples are customer's applications, so it can be different from the recommended conditions.

It does not correspond to the shank diameter ø.750".

∗Increase : Size of the increase in the cutting diameter.

■ Guideline for Selecting a JUST FIT SLEEVE

Desired = (Drillø+ Increase of JFS) + .005**"**

(Eg.) Desired diameter is 1.015**"** (oversize is taken as .005**"**).

ø1.015=(MVX1000 X ◌C125+JFS150125-010)+.005

1.000" Drill — Using JFS an Increase of .010". — Oversize

<Tool Selected>
MVX : **MVX1000 X ◌C125**
JUST FIT SLEEVE [JFS]
: **JFS150125-010**

Note 1) Oversize can vary due to the cutting conditions used, please use the above as a guideline.

Drilling

DIA EDGE

For Your Safety

- Don't handle inserts and chips without gloves.
- Please machine within the recommended application range and exchange expired tools with new ones in advance of breakage.
- Please use safety covers and wear safety glasses.
- When using compounded cutting oils, please take fire precautions.
- When attaching inserts or spare parts, please use only the correct wrench or driver.
- When using rotating tools, please make a trial run to check run-out, vibration and abnormal sounds etc.
